Blume, W. Vance Baird, Alla I. Yemets, Diego Breviario, 2008-10-23 Essential processes in biology such as cell and nuclear division development intracellular transport and physiological response rely on the perception of environmental and intracellular signals and their transduction to subcellular targets The mechanisms by which these signals are received by cells and transduced towards the proper targets by cytoskeletal components constitute one of the most important and rapidly developing areas in modern plant biology In addition fundamentally important responses of plants to biotic and abiotic factors also involve signalling to and through the cytoskeleton which helps explain the current interest of biotechnology in this field of fundamental research Manipulation of cytoskeletal components the microtubules and microfilaments had until recently not been a priority issue for plant biotechnology However given the fundamental role of the cytoskeleton during plant growth and development the potential for biotechnological applications is immense The NATO Advanced Research Workshop The Plant Cytoskeleton Genomic and Bioinformatic Tools for Biotechnology and Agriculture was held in Yalta Ukraine from September 19 to 23 2006 which continued the tradition of the first two International Symposia Plant Cytoskeleton Molecular Keys for Biotechnology Yalta Ukraine 1998 and The Plant Cytoskeleton functional diversity and biotechnological implications Kiev Ukraine 2002
