1. a) A FOR loop/ count-controlled iteration structure should be used [1] because the number of times to repeat/ iterate is known [1].
- b) **evidence of design:** identify that a loop is needed to repeatedly ask for the values for each day [1]. identify that a running total is needed to keep the sum of the rainfall amounts [1]. float (or equivalent) variable used to keep track of max and/or min – initially setting max to a small number or min to a large number [1]. update when a larger/smaller value is entered [1].
- evidence of programming:** declaration of variables for recording rainfall values as floats (or equivalent) [1]. suitable prompt to ask the user to enter a value for the rainfall and this value then stored [1]. iterative structure (loop) programmed with correct syntax that will loop the correct number of times [1]. running total variable declared and added to with each rainfall value [1]. use of a selection structure (IF statement) to overwrite a value for the max/min variable [1]. print min, max, total and average correctly [1].
