Data Matching Peter Christen, 2012-07-04 Data matching, also known as record or data linkage, entity resolution, object identification or field matching, is the task of identifying matching and merging records that correspond to the same entities from several databases or even within one database. Based on research in various domains including applied statistics, health informatics, data mining, machine learning, artificial intelligence, database management and digital libraries, significant advances have been achieved over the last decade in all aspects of the data matching process, especially on how to improve

the accuracy of data matching and its scalability to large databases Peter Christen's book is divided into three parts Part I Overview introduces the subject by presenting several sample applications and their special challenges as well as a general overview of a generic data matching process Part II Steps of the Data Matching Process then details its main steps like pre processing indexing field and record comparison classification and quality evaluation Lastly part III Further Topics deals with specific aspects like privacy real time matching or matching unstructured data Finally it briefly describes the main features of many research and open source systems available today By providing the reader with a broad range of data matching concepts and techniques and touching on all aspects of the data matching process this book helps researchers as well as students specializing in data quality or data matching aspects to familiarize themselves with recent research advances and to identify open research challenges in the area of data matching To this end each chapter of the book includes a final section that provides pointers to further background and research material Practitioners will better understand the current state of the art in data matching as well as the internal workings and limitations of current systems Especially they will learn that it is often not feasible to simply implement an existing off the shelf data matching system without substantial adaption and customization Such practical considerations are discussed for each of the major steps in the data matching process
