Data Mining in Drug Discovery Rémy D. Hoffmann, Arnaud Gohier, Pavel Pospisil, 2013-09-25 Written for drug developers rather than computer scientists this monograph adopts a systematic approach to mining scientific data sources covering all key steps in rational drug discovery from compound screening to lead compound selection and personalized medicine Clearly divided into four sections the first part discusses the different data sources available both commercial and non commercial while the next section looks at the role and value of data mining in drug discovery The third part compares the most common applications and strategies for polypharmacology where data mining can substantially enhance the research effort The final section of the book is devoted to systems biology approaches for compound testing Throughout the book industrial and academic drug discovery strategies are addressed with contributors coming from both areas enabling an informed decision on when and which data mining tools to use for one's own drug discovery project **In vivo Models for Drug Discovery**

José Miguel Vela, Rafael Maldonado, Michel Hamon, 2014-08-11 This one stop reference is the first to present the complete picture covering all relevant organisms from single cells to mammals as well as all major disease areas including neurological disorders cancer and infectious diseases Addressing the needs of the pharmaceutical industry this unique handbook adopts a broad perspective on the use of animals in the early part of the drug development process including regulatory rules and limitations as well as numerous examples from real life drug development projects After a general introduction to the topic the expert contributors from research driven pharmaceutical companies discuss the basic considerations of using animal models including ethical issues The main part of the book systematically surveys the most important disease areas for current drug development from cardiovascular to endocrine disorders and from infectious to neurological diseases For each area the availability of animal models for target validation hit finding and lead profiling is reviewed backed by numerous examples of both successes and failures among the use of animal models The whole is rounded off with a discussion of perspectives and challenges Key knowledge for drug researchers in industry as well as academia Lead Generation, 2

Volume Set Jörg Holenz, 2016-06-27 In this comprehensive two volume resource on the topic senior lead generation medicinal chemists present a coherent view of the current methods and strategies in industrial and academic lead generation This is the first book to combine both standard and innovative approaches in comparable breadth and depth including several recent successful lead generation case studies published here for the first time Beginning with a general discussion of the underlying principles and strategies individual lead generation approaches are described in detail highlighting their strengths and weaknesses along with all relevant bordering disciplines like e.g target identification and validation predictive methods molecular recognition or lead quality matrices Novel lead generation approaches for challenging targets like DNA encoded library screening or chemical biology approaches are treated here side by side with established methods as high throughput and affinity screening knowledge or fragment based lead generation and collaborative approaches Within the

entire book a very strong focus is given to highlight the application of the presented methods so that the reader will be able to learn from real life examples The final part of the book presents several lead generation case studies taken from different therapeutic fields including diabetes cardiovascular and respiratory diseases neuroscience infection and tropical diseases The result is a prime knowledge resource for medicinal chemists and for every scientist involved in lead generation

Antitargets and Drug Safety Laszlo Urban, Vinod Patel, Roy J. Vaz, 2015-06-08 With its focus on emerging concerns of kinase and GPCR mediated antitarget effects this vital reference for drug developers addresses one of the hot topics in drug safety now and in future Divided into three major parts the first section deals with novel technologies and includes the utility of adverse event reports to drug discovery the translational aspects of preclinical safety findings broader computational prediction of drug side effects and a description of the serotonergic system The main part of the book looks at some of the most common antitarget mediated side effects focusing on hepatotoxicity in drug safety cardiovascular toxicity and signaling effects via kinase and GPCR anti targets In the final section several case studies of recently developed drugs illustrate how to prevent anti target effects and how big pharma deals with them if they occur The more recent field of systems pharmacology has gained prominence and this is reflected in chapters dedicated to the utility in deciphering and modeling anti targets The final chapter is concerned with those compounds that inadvertently elicit CNS mediated adverse events including a pragmatic description of ways to mitigate these types of safety risks Written as a companion to the successful book on antitargets by Vaz and Klabunde this new volume focuses on recent progress and new classes methods and case studies that were not previously covered

Predictive Toxicology Friedlieb Pfannkuch, Laura Suter-Dick, 2015-01-20 Ein moderner integrierter Ansatz für die Sicherheitsprüfung in der Arzneimittelentwicklung Dieses Praktikerbuch behandelt In silico und In vitro Methoden sowie den Einsatz von Biomarkern mit denen bei kleinen Arzneistoffmolekülen und Biologika frühzeitig und zuverlässig Toxizitäts Screenings durchgeführt werden können
