Design Primer for Hot Climates Allan Konya,1980

Design Primer for Hot Climates Allan Konya,2013-10-22

Design Primer for Hot Climates offers a discussion of architecture and planning for hot climates The hot tropical and sub tropical regions contain most of the world s population and it is here that the majority of new buildings will be built For this reason this book concentrates on these regions but serves only as a broad outline of the climatic environmental and technological conditions The book begins with a discussion of climatic elements climatic zones and comfort This is followed by separate chapters on climatic design regional hazards e g condensation lightning storms earthquakes etc that must be considered during the design stage and factors such as site accessibility materials selection water and labor supply and building regulations and standards This book is meant not only for designers from temperate climatic areas but also for those who live in these regions in the hope that they will be stimulated to re examine conditions which may have become over familiar to them

Cultural Heritage in Asia and the Pacific Margaret G. H. Mac Lean,1993-08-19 This book contains the proceedings of a five day symposium in September 1991 sponsored by the U S Information Agency organized by US ICOMOS and designed in consultation with the Getty Conservation Institute that focused on conservation issues in Asia and the Pacific with particular attention to policies and conditions specific to the region Two keynote papers by international experts explore legal aspects of cultural heritage protection and management of cultural sites Three background papers cover the legislation of the 15 nations represented regional professional training opportunities and tropical environmental conditions that challenge managers of sites and collections The discussion summary includes suggestions for enhancing conservation awareness legislative action and policy implementation

Desert Development Yehuda Gradus,2012-12-06 The fact that approximately one third of the world s land mass is arid desert may be congenial for the camel and the cactus but not for people Nevertheless well over half a billion people or 15% of the world s population live in arid desert areas If the world s population were distributed evenly over the land surface we would expect to find about 30% of the population inhabiting arid desert areas Does the fact that only 15% of the world s population live in an arid desert environment reflect the harshness of the environment Or is it a testimony to the adaptability and ingenuity of mankind Do we view the glass as half full Or half empty The contributors to Desert Development Man and Technology in Sparselands adopt the position that the cup is half full and in fact could be filled much more Indeed many arid desert zones do thrive with life and given appropriate technological develop ment such areas could support even greater popUlations While the dire Malthusian prediction that rapid world population growth exceeds the carrying capacity of existent resource systems has gained popularity typified by the 1972 Club of Rome book Limits to Growth there is a growing body of serious work which rejects such pessimistic depletion models in favor of models which are mildly optimistic
