materials handling. Instead the focus is on analysis of the industry and its component parts from the viewpoints of construction economists and others seeking to understand the drivers and challenges that shape an area of economic activity that is a major contributor in all economies. The aim of this book is to provide an overview and discussion of several aspects of what makes construction tick. It is unlike other industry sectors in many ways being project based with often intense competition for work. Where the first book *Measuring Construction* focused on particular areas associated with quantifying various aspects of construction activity and the second *Accounting for Construction* looked more at how we record and report on construction activity, *Describing Construction* gives readers the views of experts in the field of how the construction industry is described, what it's made up of, and it even asks the question: is construction a single industry? This book will change the way most readers understand the construction industry, whatever that may be, not from the point of view of visible on-site activities but through a scientific approach to analysis and understanding of how projects, firms, and various sectors of the industry work and how things are changing and may continue to change in the future. It is essential reading for students and researchers in construction management, quantity surveying, architecture, and engineering.
