Dermatoglyphics In Medical Disorders:

Dermatoglyphics in Medical Disorders B. Schaumann, M. Alter, 2012-12-06 The skin on the fingertips and palmar and plantar surfaces of man is not smooth. It is grooved by curious ridges which form a variety of configurations. These ridge configurations have attracted the attention of laymen for millennia. They have also evoked the serious interest of scientists for more than three centuries. The anatomist Bidloo provided a description of ridge detail in the seventeenth century. Since then additional information has been added by anthropologists, biologists, and geneticists. For the last century the fact that each individual's ridge configurations are unique has been utilized as a means of personal identification, especially by law enforcement officials. Widespread medical interest in epidermal ridges developed only in the last several decades when it became apparent that many patients with chromosomal aberrations had unusual ridge formations. Inspection of skin ridges therefore promised to provide a simple, inexpensive means for determining whether a given patient had a particular chromosomal defect. However, the promise was only partially fulfilled because of the inherent variability of skin ridge configurations. It was possible to draw conclusions about ridge abnormalities in groups of patients but not always in a given individual. Patients and clinicians became somewhat disenchanted with the clinical value of studying ridges.

Skin Fingerprint Patterns in Medical Conditions Pasquale De Marco, Delve into the fascinating world of dermatoglyphics, the study of skin fingerprint patterns, and discover its vielfältig applications in medicine, forensics, anthropology, psychology, and beyond. This comprehensive guidebook provides a thorough exploration of dermatoglyphics, offering a wealth of insights into the unique patterns found on our fingertips, palms, and soles. Discover how these patterns are formed during fetal development and remain unchanged throughout our lives, making them a valuable tool for identification and diagnosis. In the realm of medicine, dermatoglyphics plays a crucial role in identifying genetic disorders such as Down syndrome and Trisomy 21, as well as a variety of other medical conditions, including autism spectrum disorder, schizophrenia, and certain types of cancer. Dermatoglyphic analysis can also provide valuable information about an individual's susceptibility to certain diseases and their response to specific treatments. Beyond the medical field, dermatoglyphics has also gained traction in forensic science, where it is used for fingerprint identification and the analysis of palm prints and other skin impressions. The unique patterns found in dermatoglyphics allow forensic experts to accurately identify individuals and link them to crime scenes. Dermatoglyphics is also making waves in the fields of anthropology and psychology. Anthropologists use dermatoglyphic patterns to study human evolution and population genetics, while psychologists are exploring the relationship between dermatoglyphics and personality traits, behavior, and cognitive abilities. This book delves into the rich history of dermatoglyphics, tracing its origins back to ancient times and highlighting the contributions of pioneering researchers who have shaped the field. It also provides a detailed overview of the various methods used in dermatoglyphic analysis, ensuring that readers gain a comprehensive understanding of the techniques employed in this fascinating field. Skin Fingerprint

Patterns in Medical Conditions is an invaluable resource for students researchers and practitioners in a wide range of fields including medicine forensics anthropology psychology and more With its clear and engaging writing style this book makes dermatoglyphics accessible to readers of all backgrounds providing a deeper understanding of the patterns that adorn our skin and their vief lting implications for our health identity and behavior If you like this book write a review

Trends in Dermatoglyphic Research N.M. Durham,C.C. Plato,2012-12-06 The preparation of a volume of worldwide research contributions can be a time consuming task which is frequently more difficult than many other types of book This particular venture was made easier by the assistance of many people Therefore we wish to acknowledge the suggestions academic support and direction of Dr Kenneth M Weiss our American editor the assistance of the staff of the Department of Sociology and Anthropology at the University of Northern Iowa particularly the generous and congenial efforts of Ms Rosemarie Skaine and Mrs Heidi Anderegg whose computer and deciphering skills may be legendary the kind responses to our long distance questions from Mr Martin Scrivener of Kluwer Publications are much appreciated finally the efforts of Dr Paul T Baker and Dr Ralph M Garruto for their help in rounding out the final contents

NMD CCP FOREWORD Among the many techniques developed by nineteenth century anatomists for the study of human morphological structures the analysis of dermatoglyphics has proven to be one of the most useful and durable The series of reports presented herein reflect the dynamism of the topic Such analyses provide a valuable tool for measuring the genetic relatedness of human populations and an inexpensive technique for alerting us to the degree of genetic involvement in the causes of many diseases

Alzheimer's Disease Abraham Fisher,Israel Hanin,Chaim Lachman,2012-12-06 Alzheimer s disease is a primary neurodegenerative disease whose incidence and prevalence is rapidly approaching epidemic proportions A major reason for this is that man is living longer than he has ever lived before and the likelihood of contracting the disease is significantly greater within the elderly portion of the population The problem becomes even more acute in the light of recent estimates which predict that the number of people living beyond the age of 65 is expected to continue to increase The impact of these statistics on the family and the health care industry in terms of time effort and cost are staggering A recent report issued by the Michigan Task Force on Alzheimer s Disease and Related Conditions 1987 effectively underscores this last point Each person with a dementing disease requires an average of seven years of care either at home or in a residential care facility Care provided at home is estimated to cost about 12 000 annually for a total of 84 000 per person This is a conservative figure however because many persons with dementia spend their last few years in a nursing home at an average cost of 22 000 per year and some spend from 10 to 15 years in a nursing home for a total cost of 220 000 to 330 000
