

Lab 2: Cadence Tutorial on Layout and DRC/LVS/PEX

Kit Documentation

The IBM design kits include many reference documents available in PDF format. You can access the most relevant of these from the cadence (virtuoso) CTW window. Select IBM_PDK > Document > Design Manual. Under 'Technology' select cmr03d and click ok. A PDF document should open called the Design Rule Manual (DRM). If this does not work, the DRM can be accessed directly by typing the following in a terminal window, where % represents the terminal window prompt (i.e. type the text after the %).

```
% screenread ~/nres413/.../IBM_PDK/cmr03d/V1.8.0.DRM/doc/cmr03d.design_manual.pdf
```

This document contains all of the electrical properties of the devices in the process. It also contains layout design rules and other information about the process. You can find a cross section of the process on page 28.

Introduction

This tutorial describes how to generate a layout view in the Cadence Virtuoso Layout Editor, how to perform layout verification in Caliber, and how to re-simulate your design with extracted parasitics in Spectre. In the first section, you will generate a layout for a simple CMOS inverter. In the second, you will create a buffer using the inverter cell you have created.

When doing layout, a techfile must be attached to the library. This defines layers, parameterized cells (pcells) and other layout-related technology information. This should have been set in Lab 1, but we will double check the techfile. To do this, start virtuoso in your cadence directory.

```
% cd ~/nres413/  
% module load /afs/nimick.edu/class/ece/modules/eecs413/11.5  
% virtuoso &
```

Open the Library Manager from the CTW by browsing to

Tools > Library Manager

Right click on the tutorial library that was created in tutorial session 1 and choose Properties. The techLibname field should read cmr03d. If it does not, enter cmr03d in the text box for techLibname and click on OK. You have now attached the techfile. In the list of cells, click on `cmos_inverter` (or the name you chose for your inverter in Lab 1), then choose File > New > Cell View.
