Compendium of Bioenergy Plants Hong Luo, Yanqi Wu, Chittaranjan Kole, 2014-03-14 This book contains the most comprehensive reviews on the latest development of switchgrass research including the agronomy of the plant the use of endophytes and mycorrhizae for biomass production genetics and breeding of bioenergy related traits molecular genetics and molecular breeding genomics transgenics processing bioconversion biosystem and chemical engineering biomass production modeling economics of switchgrass feedstock production etc The book will be of interest and great value to the switchgrass research communities in both academia and industry and a handbook for agronomists geneticists breeders molecular biologists physiologists biosystems engineers and chemical engineers Compendium of Bioenergy Plants Hong Luo, Yanqi Wu, Chittaranjan Kole, 2014-03-14 This book contains the most comprehensive reviews on the latest development of switchgrass research including the agronomy of the plant the use of endophytes and mycorrhizae for biomass production genetics and breeding of bioenergy related traits molecular genetics and molecular breeding genomics transgenics processing bioconversion biosyst Compendium of Bioenergy Plants Eric Lam, Helaine Carrer, Jorge A. da Silva, Chittaranjan Kole, 2016-01-05 This volume of the Bioenergy Plants compendium contains a collection of chapters that focus on the history economics and practical sciences related to sugarcane As one of the key biofuel crops in the world that is under large scale cultivation sugarcane is attracting interests for its adoption and emulation worldwide With a high ratio of energy **Compendium of Bioenergy Plants** Stephen L. Goldman, Chittaranjan Kole, 2014-02-06 This book evaluates maize as a bioenergy fuel source from two perspectives It explores whether the input energy needed to generate fuel significantly exceeded by the energy harvested In examining this issue the chapters provide assessments of the social economic and political impact on fuel pricing food costs and the environmental challenge with corn biomass the engine of change It then examines whether corn be genetically improved so that its biomass is significantly increased its cellulose lignin complex made more amenable to harvesting and to processing and grown in regions not normally associated with its cultivation of food **Sustainable Biofuels** Ajay Kumar Bhardwaj, Terenzio Zenone, Jiquan Chen, 2015-04-24 With oil resources approaching their limits biofuels have become increasingly attractive This book provides a detailed description of the ecological implications of second and third generation biofuel feedstock production systems beginning with an introduction to the importance of ecological sustainability alongside economic viability The book is divided into sections describing theoretical foundation and benefits of various biofuel cropping systems and providing a description of practical ecological limitations to achieve those fundamental benefits The book covers such critical issues as greenhouse gas emissions carbon balance water cycle components other biogeochemical and socioeconomic interactions alongside life cycle analysis principals for achieving sustainability These are some of the most important sustainability environmental and economic issues which biofuel industry and scientific community is seeking answers to Practical Applications of Agricultural System Models to

Optimize the Use of Limited Water Lajpat R. Ahuja, Liwang Ma, Robert J. Lascano, 2020-01-22 Completely devoted to application of models to optimize the use of limited water and nutrients in various climates this collection will inspire confidence in the capacity of modeling to tackle the biggest threats to secure agriculture To obtain the most production from available water while maintaining natural resources we need whole system based quantitative knowledge and tools to help select appropriate crops and manage water and associated inputs on a site specific basis under changing climate Site specific experimental results are available for limited locations limited periods of time and limited management options Well tested process models of cropping systems can extend field research results to long term weather conditions as well as other climates and soils allowing us to explore new management options The case studies in this volume are promising examples of these kinds of solutions

Biomass Modification, Characterization and Process Monitoring Analytics to Support Biofuel and Biomaterial Production Robert Henry, Blake Simmons, Jason Lupoi, 2016-06-09 The conversion of lignocellulosic biomass into renewable fuels and other commodities has provided an appealing alternative towards supplanting global dependence on fossil fuels The suitability of multitudes of plants for deconstruction to useful precursor molecules and products is currently being evaluated These studies have probed a variety of phenotypic traits including cellulose non cellulosic polysaccharide lignin and lignin monomer composition glucose and xylose production following enzymatic hydrolysis and an assessment of lignin carbohydrate and lignin lignin linkages to name a few These quintessential traits can provide an assessment of biomass recalcitrance enabling researchers to devise appropriate deconstruction strategies Plants with high polysaccharide and lower lignin contents have been shown to breakdown to monomeric sugars more readily Not all plants contain ideal proportions of the various cell wall constituents however The capabilities of biotechnology can alleviate this conundrum by tailoring the chemical composition of plants to be more favorable for conversion to sugars fuels etc Increases in the total biomass yield cellulose content or conversion efficiency through for example a reduction in lignin content are pathways being evaluated to genetically improve plants for use in manufacturing biofuels and bio based chemicals Although plants have been previously domesticated for food and fiber production the collection of phenotypic traits prerequisite for biofuel production may necessitate new genetic breeding schemes Given the plethora of potential plants available for exploration rapid analytical methods are needed to more efficiently screen through the bulk of samples to hone in on which feedstocks contain the desired chemistry for subsequent conversion to valuable renewable commodities The standard methods for analyzing biomass and related intermediates and finished products are laborious potentially toxic and or destructive They may also necessitate a complex data analysis significantly increasing the experimental time and add unwanted delays in process monitoring where delays can incur in significant costs Advances in thermochemical and spectroscopic techniques have enabled the screening of thousands of plants for different phenotypes such as cell wall cellulose non cellulosic polysaccharide and lignin composition lignin monomer composition or monomeric

sugar release Some instrumental methods have been coupled with multivariate analysis providing elegant chemometric predictive models enabling the accelerated identification of potential feedstocks In addition to the use of high throughput analytical methods for the characterization of feedstocks based on phenotypic metrics rapid instrumental techniques have been developed for the real time monitoring of diverse processes such as the efficacy of a specific pretreatment strategy or the formation of end products such as biofuels and biomaterials Real time process monitoring techniques are needed for all stages of the feedstocks to biofuels conversion process in order to maximize efficiency and lower costs by monitoring and optimizing performance These approaches allow researchers to adjust experimental conditions during rather than at the conclusion of a process thereby decreasing overhead expenses This Frontiers Research Topic explores options for the modification of biomass composition and the conversion of these feedstocks into to biofuels or biomaterials and the related innovations in methods for the analysis of the composition of plant biomass and advances in assessing up and downstream processes in real time Finally a review of the computational models available for techno economic modeling and lifecycle analysis will be presented

Biofertilizers for Sustainable Soil Management Shah Fahad, Shah Saud, Fazli Wahid, Muhammad Adnan, 2023-08-22 The alkaline calcareous nature high pH salinity heavy metals pollution and low organic matter content of soils in many parts of the world have diminished the soil fertility and made essential nutrients unavailable to crops To cope with the poor availability of soil nutrients improve soil health and feed the fast growing global population the farming community is using millions of tons of expensive chemical fertilizers in their fields to maintain an adequate level of nutrients for crop sustainability as well as to ensure food security In this scenario the exploitation of biofertilizers has become of paramount importance in the agricultural sector for their potential role in food safety and sustainable crop production Bearing in mind the key importance of biofertilizers this book examines the role of biofertilizers in sustainable management of soil and plant health under different conditions of the changing climate Finally it provides a platform for scientists and academicians all over the world to promote share and discuss various new issues developments and limitations in biofertilizers crops and beneficial microbes Salient Features Mainly focuses on the role of biofertilizers in managing soils for improving crop and vegetable yields as a substitute for chemical fertilizers Highlights the valuable information for the mechanism of action factors affecting and limitations of biofertilizers in the wider ecosystem Presents a diversity of techniques used across plant science Designed to cater to the needs of researchers technologists policy makers and undergraduates and postgraduates studying in the fields of organic agriculture soil microbiology soil biology soil fertility and fertilizers Addresses plant responses to biofertilizers

Handbook of Bioenergy Crop Plants Chittaranjan Kole, Chandrashekhar P. Joshi, David R. Shonnard, 2012-03-22 As the world's population is projected to reach 10 billion or more by 2100 devastating fossil fuel shortages loom in the future unless more renewable alternatives to energy are developed Bioenergy in the form of cellulosic biomass starch sugar and oils from crop plants has emerged as one of the

cheaper cleaner and environmentally sustainable alternatives to traditional forms of energy Handbook of Bioenergy Crop Plants brings together the work of a panel of global experts who survey the possibilities and challenges involved in biofuel production in the twenty first century Section One explores the genetic improvement of bioenergy crops ecological issues and biodiversity feedstock logistics and enzymatic cell wall degradation to produce biofuels and process technologies of liquid transportation fuels production It also reviews international standards for fuel quality unique issues of biofuel powered engines life cycle environmental impacts of biofuels compared with fossil fuels and social concerns Section Two examines commercialized bioenergy crops including cassava Jatropha forest trees maize oil palm oilseed Brassicas sorghum soybean sugarcane and switchgrass Section Three profiles emerging crops such as Brachypodium diesel trees minor oilseeds lower plants Paulownia shrub willow sugarbeet sunflower and sweet potato It also discusses unconventional biomass resources such as vegetable oils organic waste and municipal sludge Highlighting the special requirements major achievements and unresolved concerns in bioenergy production from crop plants the book is destined to lead to future discoveries related to the use of plants for bioenergy production It will assist in developing innovative ways of ameliorating energy problems on the horizon Proceedings of the Entomological Society of Washington Entomological Society of Washington,2018 List of members in v 1 3 5 14
