Current Themes In Theoretical Biology A Dutch Perspective:

Current Themes in Theoretical Biology Thomas A.C. Reydon, Lia Hemerik, 2005-12-05 The present volume originated in 2001 when we together with our publishing editors at then Kluwer Academic Publishers realized that the 50th following year the 50 volume of our journal *Acta Biotheoretica* would see the light We felt that this milestone should not pass unnoticed and that the appropriate way to mark it would be the publication of a special volume of papers on theoretical biology While editing this book during 2003 and early 2004 we realized that another milestone was not far off in 2005 it will be 70 years ago that the journal was founded We hope that the book lying before you will serve well to mark both events The papers collected here have been written on invitation by representatives of the theoretical biology community in The Netherlands They are intended to reflect the entire spectrum of topics on which *Acta Biotheoretica* publishes ranging from philosophy of biology on one end to mathematical biology on the other All chapters except our own introductory one have been peer reviewed according to the standards that are maintained with respect to regular submissions to *Acta Biotheoretica*

On Biopolitics Marco Piasentier, 2020-07-07 In On Biopolitics Marco Piasentier discusses one of the most persistent questions in biopolitical theory the divide between nature and language and attempts to redraw the conceptual map which has traditionally defined the permissible paths to address this question Taking his cue from Foucault's exhortation to think philologically and biologically Piasentier traverses the main theoretical and methodological frameworks which have informed the biopolitical debate on nature and language biology and politics Biopolitical theory becomes the center of gravity for an investigation encompassing diverse philosophical models from the Heideggerian linguistic turn to post Darwinian naturalism The divide between traditions is not proof of an impossible encounter but constitutes the site for a new conceptual topography Working in this interdisciplinary space Piasentier puts into question the command of language and the ends of nature two vestiges of a human all too human worldview that preclude the possibility of thinking philologically and

biologically about biopolitics On Biopolitics An Inquiry into Nature and Language is essential reading for humanities and social sciences scholars with an interest in moving beyond debates about nature and language *Not by Design* John Reiss, 2009-08-10 More than two centuries ago William Paley introduced his famous metaphor of the universe as a watch made by the Creator For Paley the exquisite structure of the universe necessitated a designer Today some 150 years since Darwin's *On the Origin of Species* was published the argument of design is seeing a revival This provocative work tells how Darwin left the door open for this revival and at the same time argues for a new conceptual framework that avoids the problematic teleology inherent in Darwin's formulation of natural selection In a wide ranging discussion of the historical and philosophical dimensions of evolutionary theory from the ancient Greeks to today John Reiss argues that we should look to the principle of the conditions for existence first formulated before *On the Origin of Species* by the French paleontologist Georges Cuvier to clarify the relation of adaptation to evolution Reiss suggests that Cuvier's principle can help resolve persistent issues in evolutionary biology including the proper definition of natural selection the distinction between natural selection and genetic drift and the meaning of genetic load Moreover he shows how this principle can help unite diverse areas of biology ranging from quantitative genetics and the theory of the levels of selection to evolutionary ecology physiology and conservation biology Habitability of Other Planets and Satellites Jean-Pierre de Vera, Joseph Seckbach, 2013-07-30 Is the Earth the right model and the only universal key to understand habitability the origin and maintenance of life Are we able to detect life elsewhere in the universe by the existing techniques and by the upcoming space missions This book tries to give answers by focusing on environmental properties which are playing a major role in influencing planetary surfaces or the interior of planets and satellites The book gives insights into the nature of planets or satellites and their potential to harbor life Different scientific disciplines are searching for the clues to classify planetary bodies as a habitable object and what kind of instruments and what kind of space exploration missions are necessary to detect life Results from model calculations field studies and from laboratory studies in planetary simulation facilities will help to elucidate if some of the planets and satellites in our solar system as well as in extra solar systems are potentially habitable for life **Life on Earth and other Planetary Bodies** Arnold Hansmeier, Stephan Kempe, Joseph Seckbach, 2012-10-29 A trio of editors Professors from Austria Germany and Israel present *Life on Earth and other Planetary Bodies* The contributors are from twenty various countries and present their research on life here as well as the possibility for extraterrestrial life This volume covers concepts such as life's origin hypothesis of Panspermia and of life possibility in the Cosmos The topic of extraterrestrial life is currently hot and the object of several congresses and conferences While the diversity of normal biota is well known life on the edge of the extremophiles is more limited and less distributed Other subjects discussed are Astrobiology with the frozen worlds of Mars Europa and Titan where extant or extinct microbial life may exist in subsurface oceans conditions on icy Mars with its saline alkaline and liquid water which has been recently discovered chances of habitable Earth like or the terrestrial analogues exoplanets and

SETI's search for extraterrestrial Intelligence Genesis - In The Beginning Joseph Seckbach, 2012-03-21

This volume covers the role of symmetry information and order homochiral biomolecules in the beginning of Life. The models of protocells and the genetic code with gene transfer are important topics in this volume. Three chapters discuss the Panspermia hypothesis to answer Are we from outer Space.
