Wood Design Manual, 2010 Canadian Wood Council, Conseil canadien du bois, 2010 Introduction to Wood Design, 1996 **Elements of Earthquake Engineering and Structural Dynamics** André Filiatrault, 2013 In order to reduce the seismic risk facing many densely populated regions worldwide including Canada and the United States modern earthquake engineering should be more widely applied But current literature on earthquake engineering may be difficult to grasp for structural engineers who are untrained in seismic design In addition no single resource addressed seismic design practices in both Canada and the United States until now Elements of Earthquake Engineering and Structural Dynamics was written to fill the gap It presents the key elements of earthquake engineering and structural dynamics at an introductory level and gives readers the basic knowledge they need to apply the seismic provisions contained in Canadian and American building codes

Use of Timber in Tall Multi-Storey Buildings Ian Smith, Andrea Frangi, 2014-01-01 Since the dawn of civilization timber has been a primary material for achieving great structural engineering feats Yet during the late 19th century and most of the 20th century it lost currency as a preferred material for construction of large and tall multi storey building superstructures This Structural Engineering Document SED addresses a reawakening of interest in timber and timber based products as primary construction materials for relatively tall multi storey buildings Emphasis throughout is on holistically addressing various aspects of performance of complete systems reflecting that major gaps in knowhow relate to design concepts rather than technical information about timber as a material Special consideration is given to structural form fire vulnerability and durability aspects for attaining desired building performance over lifespans that can be centuries long

Introduction to Wood Design Canadian Wood Council, Conseil canadien du bois, 2011 Timber Buildings and Sustainability Giovanna Concu, 2019-12-04 The construction sector alone accounts for 40 percent of resource consumption and environmental pollution In line with the current considerations on environmental sustainability particular attention is paid to eco sustainable building materials such as timber Timber is able to perform both load bearing and comfort constructive functions It is also a natural renewable and recyclable material However its use as an engineering material calls for constant development and research This book provides insight into the spread of the use of timber in the construction industry presenting some thoughts on important aspects related to production design and responsible use
