Computational Learning Theory Computational Learning Theory:

Computational Learning Theory Martin Anthony, N. Biggs, 1997-02-27 Computational learning theory is a subject which has been advancing rapidly in the last few years The authors concentrate on the probably approximately correct model of learning and gradually develop the ideas of efficiency considerations Finally applications of the theory to artificial neural networks are considered Many exercises are included throughout and the list of references is extensive This volume is relatively self contained as the necessary background material from logic probability and complexity theory is included It will therefore form an introduction to the theory of computational learning suitable for a broad spectrum of graduate students from theoretical computer science and mathematics

An Introduction to Computational Learning Theory Michael J. Kearns, Umesh Vazirani, 1994-08-15 Emphasizing issues of computational efficiency Michael Kearns and Umesh Vazirani introduce a number of central topics in computational learning theory for researchers and students in artificial intelligence neural networks theoretical computer science and statistics Emphasizing issues of computational efficiency Michael Kearns and Umesh Vazirani introduce a number of central topics in computational learning theory for researchers and students in artificial intelligence neural networks theoretical computer science and statistics Computational learning theory is a new and rapidly expanding area of research that examines formal models of induction with the goals of discovering the common methods underlying efficient learning algorithms and identifying the computational impediments to learning Each topic in the book has been chosen to elucidate a general principle which is explored in a precise formal setting Intuition has been emphasized in the presentation to make the material accessible to the nontheoretician while still providing precise arguments for the specialist This balance is the result of new proofs of established theorems and new presentations of the standard proofs The topics covered include the motivation definitions and fundamental results both positive and negative for the widely studied L G Valiant model of Probably Approximately Correct Learning Occam's Razor which formalizes a relationship between learning and data compression the Vapnik Chervonenkis dimension the equivalence of weak and strong learning efficient learning in the presence of noise by the method of statistical queries relationships between learning and cryptography and the resulting computational limitations on efficient learning reducibility between learning problems and algorithms for learning finite automata from active experimentation

Computational Learning Theory and Natural Learning Systems Stephen José Hanson, Thomas Petsche, Ronald L. Rivest, 1994 As with Volume I this second volume represents a synthesis of issues in three historically distinct areas of learning research computational learning theory neural network research and symbolic machine learning While the first volume provided a forum for building a science of computational learning across fields this volume attempts to define plausible areas of joint research the contributions are concerned with finding constraints for theory while at the same time interpreting theoretic results in the context of experiments with actual learning systems Subsequent volumes will focus on areas identified as research opportunities Computational learning theory neural networks and AI machine learning appear to be disparate fields in fact they have the same goal to build a machine or program that can learn from its environment Accordingly many of the papers in this volume deal with the problem of learning from examples In particular they are intended to encourage discussion between those trying to build learning algorithms for instance algorithms addressed by learning theoretic analyses are quite different from those used by neural network or machine learning researchers and those trying to analyze them The first section provides theoretical explanations for the learning systems addressed the second section focuses on issues in model selection and inductive bias the third section presents new learning algorithms the fourth section explores the dynamics of learning in feedforward neural networks and the final section focuses on the application of learning algorithms A Bradford Book
