

Study Guide:

The Cell Cycle & Reproduction

The Cell Cycle

1. Three reasons that cells divide are:

- Reproduction (only asexual reproduction - binary fission)
- Growth
- Repair or replace damaged cells

2. **Prokaryotes** are organisms that do not have a **nucleus**. The DNA in prokaryotes resides in the cytoplasm of the cell.

- Are unicellular organisms like **bacteria**.

3. **Eukaryotes** are organisms that do have a nucleus. The DNA resides in the nucleus of the cell.

- Are multicellular organisms like **humans/animals/plants**.

4. Fill in the table below with information on the **Cell Cycle**.

Step in the Cell Cycle	Picture	Explanation
Interphase		Cell spends most of its life in this phase. Cell is performing normal cell functions. Organelles present. DNA is copied in the nucleus. The DNA is known as chromatin, long strands of disorganized protein.
Prophase		Mitosis, the process of cell division begins. Chromosomes, a condensed form of DNA form. The nucleus starts to disintegrate.
Metaphase		The chromosomes line up in the middle of the cell. Spindle fibers start to form.
