defense Issues on Risk Analysis for Critical Infrastructure Protection Vittorio Rosato, Antonio Di Pietro, 2021-07-07 Critical infrastructure provides essential services to citizens. The mutual dependencies of services between systems form a complex system of systems with a large perturbation surface prone to be damaged by natural and anthropic events. Their intrinsic and extrinsic vulnerabilities could be overcome by providing them adaptive properties to allow fast and effective recovery from loss of functionality. Resilience is thus the key issue and its enhancement at the systemic level is a priority goal to be achieved. This volume reviews recent insights into the different domains: resilience enhancing strategies, impact and threats knowledge and dependency related issues, and proposes new strategies for better critical infrastructure protection. **Critical**

Infrastructures at Risk A.V. Gheorghe, M. Masera, M. Weijnen, 2006-01-27 Europe witnessed in the last years a number of significant power contingencies. Some of them revealed the potentiality of vast impact on the welfare of society and triggered pressing questions on the reliability of electric power systems. Society has incorporated electricity as an inherent component indispensable for achieving the expected level of quality of life. Therefore any impingement on the continuity of the electricity service would be able to distress society as a whole, affecting individuals' social and economic activities, other infrastructures and essential government functions. It would be possible to hypothesize that in extreme situations this could even upset national security. This book explores the potential risks and vulnerabilities of the European electricity infrastructure, other infrastructures and our society as a whole increasingly depend on. The work was initiated by the need to verify the potential effects of the ongoing market and technical transformation of the infrastructure which is fundamentally changing its operation and performance. The final aim is to set the basis for an appropriate industrial and political European wide response to the risk challenges. Risk Management and Critical Infrastructure Protection John Moteff, 2005 The 9 11

Commission recommended that efforts to protect various modes of transportation and allocation of federal assistance to state and local governments should be based on an assessment of risk. In doing so the Commission was reiterating existing federal policy regarding the protection of all the nation's critical infrastructures. The Homeland Security Act of 2002 P L 107 296 and other Administration documents have assigned the Department of Homeland Security specific duties associated with coordinating with the nation's efforts to protect its critical infrastructures including using a risk management approach to set priorities. Many of these duties have been delegated to the Information Analysis and Infrastructure Protection (IAIP) Directorate. Risk assessment involves the integration of threat, vulnerability and consequence information. Risk management involves deciding which protective measures to take based on an agreed upon risk reduction strategy. Many models, methodologies have been developed by which threats, vulnerabilities and risks are integrated and then used to inform the allocations of resources to reduce those risks. For the most part these methodologies consist of the following elements performed more or less in the following order: 1 identify assets and identify which are most critical 2 identify, characterize and assess threats 3 assess the vulnerability of critical assets to specific threats 4 determine the risk, i.e. the expected

consequences of specific types of attacks on specific assets 5 identify ways to reduce those risks and 6 prioritize risk reduction measures based on a strategy The IA IP Directorate has been accumulating a list of infrastructure assets specific sites and facilities From this list the Directorate is selecting assets that have been judged to be critical from a national point of view The Directorate intends to assess the vulnerability of all assets on this shorter list According to Directorate officials vulnerability assessments and threat information are considered when determining the risk watch asset poses to the nation The risk assessment is then used to prioritize subsequent additional protection activities The IA IP Directorate s efforts to date however raise several concerns ranging from the process and criteria used to populate its lists of assets its prioritization strategy and the extent to which the Directorate is coordinating its efforts with the intelligence community and other agencies both internal and external to the Department This report will be updated as needed

Risk and Interdependencies in Critical Infrastructures Per Hokstad, Ingrid B. Utne, Jørn Vatn, 2012-12-18 Today s society is completely dependent on critical networks such as water supply sewage electricity ICT and transportation Risk and vulnerability analyses are needed to grasp the impact of threats and hazards However these become quite complex as there are strong interdependencies both within and between infrastructure systems Risk and Interdependencies in Critical Infrastructures A guideline for analysis provides methods for analyzing risks and interdependencies of critical infrastructures A number of analysis approaches are described and are adapted to each of these infrastructures Various approaches are also revised and all are supported by several examples and illustrations Particular emphasis is given to the analysis of various interdependencies that often exist between the infrastructures Risk and Interdependencies in Critical Infrastructures A guideline for analysis provides a good tool to identify the hazards that are threatening your infrastructures and will enhance the understanding on how these threats can propagate throughout the system and also affect other infrastructures thereby identifying useful risk reducing measures It is essential reading for municipalities and infrastructure owners that are obliged to know about and prepare for the risks and vulnerabilities of the critical infrastructures for which they are responsible

Critical Infrastructures at Risk A.V. Gheorghe, M. Masera, M. Weijnen, L.J. Wenning, Gregory A. Kiker, 2007-09-17 This book offers a state of the science approach to current environmental security threats and infrastructure vulnerabilities It emphasizes beliefs that the convergence of seemingly disparate viewpoints and often uncertain and limited information is possible only by using one or more available risk assessment methodologies and decision making tools such as risk assessment and multi criteria decision analysis MCDA *OECD Reviews of Risk Management Policies Good Governance for Critical Infrastructure Resilience* OECD, 2019-04-17 Critical infrastructures are the backbone of modern interconnected economies The disruption of key systems and essential services such as telecommunications energy or water supply transportation or finance can cause substantial economic damage This report looks at how to boost critical infrastructure resilience in a dynamic risk landscape and discusses policy options and governance models to promote up front resilience investments
