Farming Vegetables and Grains Michael Burgan,2011-07 Discusses the ethical issues related to the growing of mass amounts of the grains and vegetables needed to feed the world s population

Making Food Choices Michael Burgan,2011-07 Encourages readers to think critically about their food choices and choose what they eat and where it comes from with attention to the effect on the environment

The Routledge Handbook of Food Ethics Mary Rawlinson,Caleb Ward,2016-07-01 While the history of philosophy has traditionally given scant attention to food and the ethics of eating in the last few decades the subject of food ethics has emerged as a major topic encompassing a wide array of issues including labor justice public health social inequity animal rights and environmental ethics This handbook provides a much needed philosophical analysis of the ethical implications of the need to eat and the role that food plays in social cultural and political life Unlike other books on the topic this text integrates traditional approaches to the subject with cutting edge research in order to set a new agenda for philosophical discussions of food ethics The Routledge Handbook of Food Ethics is an outstanding reference source to the key topics problems and debates in this exciting subject and is the first collection of its kind Comprising over 35 chapters by a team of international contributors the Handbook is divided into 7 parts the phenomenology of food gender and food food and cultural diversity liberty choice and food policy food and the environment farming and eating other animals food justice Essential reading for students and researchers in food ethics it is also an invaluable resource for those in related disciplines such as environmental ethics and bioethics

Food futures: ethics, science and culture I. Anna S. Olsson,Sofia M. Araújo,M. Fátima Vieira,2023-07-31 Food is at the centre of human existence We eat every day not only to satisfy our physical needs but also as part of cultural and social interaction Food choices and markets shape the agricultural landscape and the cities we live in Whereas what we choose to eat and feed our family is part of who we are a growing number of actors compete to influence our food habits through marketing strategies and nutritional advice And ethical considerations are coupled with every choice over food whether related to production distribution consumption food waste policy in general marketing or advice Given the variety of implications the food problem entails the construction of an inclusive society must redirect the concerns about food in the present to the imagination of future alternatives The search for innovative solutions calls for multidisciplinary critical enquiry and utopian thinking will be instrumental in that regard This book brings together work by scholars in a wide range of disciplines addressing many

different topics related to food futures Topics covered include food and literature food waste food communication food policy corporate social responsibility and public procurement in food supply responsible research and innovation in food production as well as sustainability and animal ethics and welfare The Routledge Handbook of Animal Ethics Bob Fischer,2019-12-06

There isn't one conversation about animal ethics Instead there are several important ones that are scattered across many disciplines This volume both surveys the field of animal ethics and draws professional philosophers graduate students and undergraduates more deeply into the discussions that are happening outside of philosophy departments To that end the volume contains more nonphilosophers than philosophers explicitly inviting scholars from other fields such as animal science ecology economics psychology law environmental science and applied biology among others to bring their own disciplinary resources to bear on matters that affect animals The Routledge Handbook of Animal Ethics is composed of 44 chapters all appearing in print here for the first time and organized into the following six sections I Thinking About Animals II Animal Agriculture and Hunting III Animal Research and Genetic Engineering IV Companion Animals V Wild Animals Conservation Management and Ethics VI Animal Activism The chapters are brief and they have been written in a way that is accessible to serious undergraduate students regardless of their field of study The volume covers everything from animal cognition to the state of current fisheries from genetic modification to intersection animal activism It is a resource designed for anyone interested in the moral issues that emerge from human interactions with animals **Seafood Supply Chains** Miriam

Greenwood,2019-01-16 This book provides a historical and analytical account of changes in the seafood supply chain in Britain from the mid twentieth century to the present looking at the impact of various types of governance The governance of marine fisheries has been a contested issue for decades with increasing anxieties about overfishing In tandem the rise of aquaculture fish and shellfish farming has driven another set of environmental concerns In the food system there have been scandals about safety failures and about fraud At the same time governments issue advice urging people to eat fish for its health benefits In the context of these problems and contradictions how have governments the food industry and ordinary consumers responded The author shows how different types of governance and regulation have been used to seek seafood sustainability and food safety and to communicate nutritional messages to the public and with what effects The book also presents a new model for understanding food chains which combines governance and power approaches with an emphasis on understanding the interests served and the resulting balance of public and private benefits This shows that the role of state regulation should have greater emphasis in governance and agri food analysis and that theories about supply chain functioning including the part played by major retailers and civil society should be modified by a more nuanced understanding of the role of standards and certification systems Although much of the focus is on the UK and Europe this book provides key lessons internationally for the governance of seafood and other agri food supply chains The book will be of interest to students of food policy and those working in the seafood industry or studying for connected qualifications and

more widely to readers with an interest in seafood issues and problems

Food Systems, Health, and Well-being

Virginie Zoumenou, 2024-09-28 While the importance of food to health and well being is clear the specific ways in which food systems contribute to individual and community health are not well understood This is a complex issue which requires improving food systems as well as changing mindsets and behaviors of individuals within the food system Many of the food related health problems in the US disproportionately affect children women ethnic minorities and low income people Addressing these problems requires that we understand more about the processes of institutional change structural conditions perceptions and decision making processes The environment itself determines much of what individuals can draw from it Community norms may dictate who has access to food assistance engaged communities may provide more food assistance and may make food resources more easily accessible for the poor In addition consumer and producer attitudes and interests may conflict over some issues surrounding sustainability and health The present volume focuses on food production distribution and consumption and their effects on individual health The text is divided into three parts Part One focuses on the relationship between food systems families health sociodemographic and environmental factors Part Two explores the relationship between food systems food advertisements and community engagement and Part Three discusses current research and interventions toward a more equitable food system
