Handbook of Neurocritical Care Anish Bhardwaj, Marek A. Mirski, 2010-10-14 Neurocritical care as a subspecialty has grown rapidly over the last two decades and has reached a level of distinct maturity with the advent of newer monitoring diagnostic and therapeutic modalities in a variety of brain and spinal cord injury paradigms Handbook of Neurocritical Care Second Edition

remains true to the operative tenet that time is brain and rapid diagnosis and therapeutic interventions in these challenging patients cannot be overemphasized. The second edition of this important Handbook again serves as a quick practical reference for those involved in the care of critically ill neurological and neurosurgical patients. The care provided to this subset of critically ill patients continues to be multidisciplinary and includes care rendered from colleagues in emergency medical services, emergency medicine, neurology, neurosurgery, anesthesiology, critical care nursing, and physician assistance. Fully updated, all of the chapters again consist of easy-to-read bulleted points followed by a list of Key Points and important references, allowing for rapid access to vital information critical for fast and timely decision making. The first section covers a myriad of important general principles, while the second section addresses the major diagnostic categories of neurocritical care, with several new topics. These include, for example, neuroleptic malignant syndrome and malignant hyperthermia, meningitis and encephalitis, and intraventricular hemorrhage. Readers will find the algorithms, tables, and illustrations throughout the book not only useful but truly invaluable in facilitating fast and accurate decision making. Accessible and comprehensive, *Handbook of Neurocritical Care, Second Edition* again fills a vital need by providing readers with a succinct and practical approach to the management of critically ill neurological and neurosurgical patients.

Status Epilepticus
Frank W. Drislane, 2007-10-28. A panel of senior clinicians critically reviews the many forms of status epilepticus (SE), their causes, manifestations, methods of diagnosis, and appropriate treatments. The emphasis is on the disease as encountered by the clinician in the field and the importance of correct recognition and diagnosis. The authors provide for each form of SE the underlying genetic, biological, and developmental background, the pathophysiological processes, as well as the precipitating factors that lead to an episode. For the difficult problem of diagnosing nonconvulsive SE, they offer detailed syndrome classifications, differential diagnoses, descriptions of seizure imitators, notes on unusual behavioral and cognitive manifestations, and carefully delineated clinical presentations. Additional highlights include striking EEG reproductions that provide classic examples of patients in SE, SE in very young children and neonates, and an analysis of the cellular physiology and processes occurring during SE.

Critical Care Neurology Part I, 2017-01-25. *Critical Care Neurology Part I* focuses on the care of specialists and general neurologists that consult in the ICU and their work with patients in acute life-threatening situations who are dealing with neurologic or neurosurgical crises emanating from either a preexisting neurologic syndrome or from a new neurologic complication appearing as a result of another medical or surgical critical illness. These two separate clinical situations form the pillars of neurocritical care; hence, these practices are addressed via two separate but closely related HCN volumes. Chapters in both focus on pathophysiology and management and are tailored for both general neurologists and active neurocritical specialists, with a specific focus on management over diagnostics. Part I addresses the principles of neurocritical care and the management of various neurologic diseases. Part II addresses the interplay between neurologic complications and the surgical, medical, cardiac, and trauma of critical illnesses.

that most typically present in the ICU Provides an essential neurocritical care overview for general neurologists Presents neurocritical care specialists with an update on severe neurological illness management Offers coverage of all the most frequent neurologic diseases requiring intensive care Includes chapters authored by global leaders in the field providing the broadest most expert coverage available on the topics discussed

Thrombolytic Therapy for Acute Stroke Patrick D. Lyden, 2007-11-08 It often takes time for a new therapeutic modality to mature into an accepted treatment option After initial approval new drugs devices and procedures all go through this process until they become vetted by the scientific community as well as the medical community at large Thrombolysis for treatment of stroke is no exception Thrombolytic Therapy for Acute Stroke Second Edition comes four years after the first edition and provides a very comprehensive updated perspective on the use of intravenous rt TPA in acute stroke The authors provide longer term follow up on the pivotal clinical trials that led to Food and Drug Administration approval data concerning phase 4 trials in larger numbers of patients and most importantly the community experience that has accumulated since its release They add to this the latest promising information concerning intra arterial thrombolysis which is still under investigation and more speculative sections concerning possible new avenues of clinical research such as combining intravenous thrombolysis with neuroprotective therapies or intra arterial thrombolysis A wealth of factual information is supplemented by chapters containing sage opinion from Drs Lyden and Caplan concerning the logistical economic and procedural issues that have been generated since the advent of this technology Importantly diagnosis does not take a back seat to therapeutics as illustrated by sections devoted to evaluation of the stroke patient very useful illustrative cases and clinical comments and chapters on the latest in imaging as applied to this field

Deep Brain Stimulation in Neurological and Psychiatric Disorders Daniel Tarsy, Jerrold Lee Vitek, Philip Starr, Michael Okun, 2008-06-04 Chronic deep brain stimulation DBS has been a rapidly evolving area of neurotherapeutics since its initial introduction for the treatment of Parkinson's disease and essential tremor in the 1990s For these conditions DBS is now considered accepted therapy for patients failing to adequately respond to medical treatment Since the 1990s new clinical indications anatomic targets and technologies have contributed to an expanding role for DBS in the treatment of other movement disorders such as dystonia and Tourette syndrome as well as for other neurologic disorders

such as epilepsy and cluster headache Early experience has also been reported for psychiatric syndromes such as obsessive compulsive disorder and depression Experience with DBS in psychiatric disorders is very limited but is reviewed in this volume as neuropsychiatric indications are expected to grow in coming years Because of the rapidly increasing application of DBS for neurologic and psychiatric indications and the recruitment of increasing numbers of neurologic neurosurgical and psychiatric clinicians to the field it is appropriate to provide a resource that updates the underlying scientific background describes methodologies and standards of treatment and provides information on new technologies essential for clinical success and to advance the field Deep Brain Stimulation in Neurological and Psychiatric Disorders begins with reviews of the functional anatomy and physiology of motor and nonmotor aspects of the basal ganglia and their connections which underlie the application of DBS to neurological and psychiatric disorders
