The systems movement now 40 years old is made up of many associations of systems thinkers from different disciplines all over the world The United Kingdom Systems Society UKSS was formed in 1978 Today it has over 300 members and is committed to the development and promotion of systems philosophy theory concepts and methodologies for improving decision making for the benefit of organizations and wider society The first UKSS International Conference was held at the University of Hull in July of Huddersfield 1989 Since then we have held International Conferences at the Universities 1991 and Paisley 1993 The UKSS International Conferences are now an established biannual event and this our fourth international conference will be jointly hosted by the Universities of Hull and Humberside Systems science is considered to be a trans discipline which promotes critical and effective intervention in complex organisational and social problem situations As such it traverses hard through soft to critical systems thinking and methodologies Yet despite the currently robust state of the UKSS the systems movement cannot be described as an international movement different subdisciplines are at different stages of development and are often engaged in pursuing their own particular interests and themes with little conversation between the subdisciplines despite their common interest in systems

Systems for Sustainability Frank A. Stowell, Ray L. Ison, Rosalind Armson, Jacky Holloway, Sue Jackson, Steve McRobb, 2013-11-11 The term sustainability has entered the lexicon of many academic disciplines and fields of professional practice but to date does not appear to have been seriously considered within the systems community unless perhaps under other guises Within the wider community there is no consensus around what sustainability means with some authors identifying 70 to 100 definitions of the term Some see sustainability as the precise and quantifiable outcomes of biological systems whilst others see it in terms of processes relevant to personal and organizational change with the potential to effect changes in our relationships with our environments Internationally it has been increasingly used in relation to the term sustainable development a term popularised by the Brundland Commission's report in 1987 entitled Our Common Future Despite this diversity and polarised perception on its utility unlike many other popular terms it has not had its time and subsided quietly from our language It is therefore timely for the systems community to explore the relationship between systems and sustainability in a range of contexts Participants in this the 5th International Conference of the United Kingdom Systems Society UKSS have been invited to reflect critically on the contribution of systems thinking and action to sustainability to the sustainability of personal relationships the organizations in which live and work and our natural environment

Dwivedi,Michael R. Wade,Scott L. Schneberger,2011-09-21 The overall mission of this book is to provide a comprehensive understanding and

coverage of the various theories and models used in IS research. Specifically, it aims to focus on the following key objectives:

- To describe the various theories and models applicable to studying IS/IT management issues.
- To outline and describe for each of the various theories and models independent and dependent constructs, reference discipline, originating area, originating author, seminal articles, level of analysis (i.e., firm, individual, industry) and links with other theories.
- To provide a critical review/meta-analysis of IS/IT management articles that have used a particular theory/model.
- To discuss how a theory can be used to better understand how information systems can be effectively deployed in today's digital world.

This book contributes to our understanding of a number of theories and models. The theoretical contribution of this book is that it analyzes and synthesizes the relevant literature in order to enhance knowledge of IS theories and models from various perspectives. To cater to the information needs of a diverse spectrum of readers, this book is structured into two volumes, with each volume further broken down into two sections.

The first section of Volume 1 presents detailed descriptions of a set of theories centered around the IS lifecycle, including the Success Model, Technology Acceptance Model, User Resistance Theories, and four others. The second section of Volume 1 contains strategic and economic theories, including a Resource Based View, Theory of Slack Resources, Portfolio Theory, Discrepancy Theory, Models, and eleven others.

The first section of Volume 2 concerns socio-psychological theories. These include Personal Construct Theory, Psychological Ownership, Transactive Memory, Language Action Approach, and nine others. The second section of Volume 2 deals with methodological theories, including Critical Realism, Grounded Theory, Narrative Inquiry, Work System Method, and four others. Together, these theories provide a rich tapestry of knowledge around the use of theory in IS research. Since most of these theories are from contributing disciplines, they provide a window into the world of external thought leadership.
