EXPERIMENT 2

Cheek Cell Lab

The purpose of this lab is to review basic cell biology and to identify specific cells through staining techniques.

Today we will examine your own cells. That's right, your living cells. You are going to remove some cheek cells from the inside of your mouth. You will want to make sure you do not have food particles in the saliva when doing this. Rinse your mouth with water if you need to. You will then prepare a slide and observe the cell and its parts, then label each organelle.

OBJECTIVES:

1. Understand the use of the microscope and its functions.
2. List the materials used in preparation of wet mount slides.
3. Prepare a slide and identify the cell through correct use of the microscope.
4. Draw and label the parts of the cheek cell.
5. Practice safe laboratory techniques while preparing slides.

MATERIALS

Slide Swab
Slide
Slide cover
Methylene Blue stain, 1% Solution
Forceps
Pencil and paper
Microscope

PROCEDURES:

1. Gather all your materials and prepare your microscope.
2. Gently scrape the inside of your mouth with a swab several times with adequate pressure. This scraping will collect some of the cheek cells.
