Ichthyoses P. M. Elias, M. L. Williams, D. Crumrine, M. Schmuth, 2011-07-01 The various manifestations of ichthyoses are classified either by their appearance or their molecular genetics This volume focuses on generalized inherited disorders of cornification which constitute an ever enlarging group of monogenic diseases caused by a large number of genes that affect a broad array of cellular functions The authors overview reflects their unique perspective that the clinical phenotype in the inherited ichthyoses mirrors a best attempt by a metabolically compromised epidermis to maintain a barrier sufficiently impermeable for survival in a desiccating external environment The basis for threats to survival is illuminated and the systemic problems including growth failure also reflect a compromised barrier A new consensus classification of these disorders is provided and the distinguishing clinical features of each disorder are described Further the latest molecular genetic information is succinctly reviewed with up to date and comprehensive references Yet the major emphases of this volume are on disease pathogenesis and on the identification of key ultrastructural features This publication will prove an invaluable aid to dermatologists pediatric dermatologists and pediatricians dealing with patients with inherited ichthyoses In addition clinical geneticists and dermatopathologists will find it interesting reading A Dictionary of Biomedicine John Lackie, 2010-07-29 This dictionary includes 10 000 A Z entries on all areas of biomedicine It also covers terms from related areas including anatomy genetics pathology pharmacology and clinical medicine Fully cross referenced and with web links this is a clear and authoritative guide to an increasingly important area of medicine **Rook's Textbook of Dermatology** Christopher E. It is a great pleasure for me to see this work in print As outlined by Dr Traupe at least 20 different types of ichthyosis have been identified to date This book will effectively help to establish a correct diagnosis as a basis for genetic counseling Dr Traupe proposes a new classification of the ichthyoses based on reasonable clinical criteria He lets the reader share in his enormous knowledge and safely guides him through the difficult field of nomenclature He describes the particular nature of these scaling disorders in a manner as simple as possible During the last few years research on ichthyosis has become a fascinating scientific challenge due to the introduction of novel investigative approaches The main advantage of this book lies in the fact that the author successfully combines recent achievements made in lipid analysis enzymology electron microscopy and molecular genetics Heiko Traupe began his career in dermatology 11 years ago as a resident in the Department of Dermatology in Munster As we were both interested in the genetic aspects of skin diseases this was the starting point of a most fruitful collaboration which is still continuing During our common work in Munster Dr Traupe was able thanks to his unceasing clinical curiosity to describe many novel aspects within the field of ichthyosis and I took pride in coauthoring papers on new items such as cryptorchidism as a feature associated with X linked recessive ichthyosis autosomal dominant lamellar ichthyosis and alopecia ichthyotica
