Descartes Critical And Interpretive Essays:

Descartes Michael Hooker,1978 *Descartes* Michael Hooker,1978 Leibniz Michael Hooker,1982 *Descartes's Dualism* Marleen ROZEMOND,Marleen Rozemond,2009-06-30 Descartes an acknowledged founder of modern philosophy is identified particularly with mind body dualism the view that the mind is an incorporeal entity But this view was not entirely original with Descartes and in fact to a significant extent it was widely accepted by the Aristotelian scholastics who preceded him although they entertained a different conception of the nature of mind body and the relationship between them In her first book Marleen Rozemond explicates Descartes s aim to provide a metaphysics that would accommodate mechanistic science and supplant scholasticism Her approach includes discussion of central differences from and similarities to the scholastics and how these discriminations affected Descartes s defense of the incorporeity of the mind and the mechanistic conception of body Confronting the question of how in his view mind and body are united she examines his defense of this union on the basis of sensation In the course of her argument she focuses on a few of the scholastics to whom Descartes referred in his own writings Thomas Aquinas Francisco Suarez Eustachius of St Paul and the Jesuits of Coimbra This new systematic account of Descartes s dualism amply demonstrates why he still deserves serious study and respect for his extraordinary philosophical achievements

Descartes's Method Tarek Dika,Tarek R. Dika,2023 Ren Descartes revolutionized the method of intellectual inquiry Tarek Dika presents a systematic interpretation and defense of Descartes method and its efficacy and demonstrates the fruits of this interpretation applied to metaphysics optics and mathematics

Thoughts Stephen Yablo,2008-11-27 Thoughts is a collection of twelve essays by Stephen Yablo which together constitute a modern day examination of Cartesian themes in the metaphysics of mind Yablo offers penetrating discussions of such topics as the relation between the mental and the physical mental causation the possibility of disembodied existence the relation between conceivability and possibility varieties of necessity and issues in the theory of content arising out of the foregoing The collection represents almost all of Yablo s work on these topics and features one previously unpublished piece

Unspeakable Subjects Jacques Lezra,1997 In readings that link works of Cervantes Shakespeare and Descartes with current debates in philosophy psychoanalysis and literary and cultural criticism the author reassesses the grounds of literary and philosophical history as a materialist practice of eventful reading

Cartesian Empiricisms Mihnea Dobre,Tammy Nyden,2013-11-29 Cartesian Empiricisms considers the role Cartesians played in the acceptance of experiment in natural philosophy during the seventeenth century It aims to correct a partial image of Cartesian philosophers as paradigmatic system builders who failed to meet challenges posed by the new science s innovative methods Studies in this volume argue that far from being strangers to experiment many Cartesians used and integrated it into their natural philosophies Chapter 1 reviews the historiographies of early modern philosophy science and Cartesianism and their recent critiques The first part of the volume explores various Cartesian contexts of experiment the impact of French condemnations of Cartesian philosophy in

the second half of the seventeenth century the relation between Cartesian natural philosophy and the Parisian academies of the 1660s the complex interplay between Cartesianism and Newtonianism in the Dutch Republic the Cartesian influence on medical teaching at the University of Duisburg and the challenges chemistry posed to the Cartesian theory of matter The second part of the volume examines the work of particular Cartesians such as Henricus Regius Robert Desgabets Jacques Rohault Burchard de Volder Antoine Le Grand and Balthasar Bekker Together these studies counter scientific revolution narratives that take rationalism and empiricism to be two mutually exclusive epistemological and methodological paradigms The volume is thus a helpful instrument for anyone interested both in the histories of early modern philosophy and science as well as for scholars interested in new evaluations of the historiographical tools that framed our traditional narratives *The Proof of the External World* Steven M Duncan, 2008-11-27 Descartes attempt to ground the possibility of human knowledge in the existence of God was judged to be a complete failure by his contemporaries This remains the universal opinion of philosophers to this day despite the fact that three and a half centuries of secular epistemology which attempts to ground the possibility of knowledge either in the unaided human intellect or in natural processes has failed to do any better Further the leading twentieth century attempts at theistic epistemology reject both the conception of knowledge and the standards of epistemic evaluation that Descartes takes for granted In this book partly an interpretation of Descartes and partly an attempt to complete his project the author endeavours to show that a theistic epistemology incorporating Platonic and Aristotelian Thomist elements can revitalize the Cartesian approach to the solution of the central problems of epistemology including that most elusive of prizes the proof of the external world This book is essential reading for students of epistemology metaphysics and philosophy *The Limits of Dream* J. F. Pagel, 2010-07-28 *The Limits of Dream* focuses on what we currently know of the human central nervous system CNS examining the basic sciences of neurochemistry neuroanatomy and CNS electrophysiology as these sciences apply to dream then reaching beyond basic science to examine the cognitive science of dreaming including the processes of memory the perceptual interface and visual imagery Building on what is known of intrapersonal CNS processing the book steps outside the physical body to explore artificially created dreams and their use in filmmaking art and story as well as the role of dreaming in creative process and creative madness The limits of our scientific knowledge of dream frame this window that can be used to explore the border between body and mind What is known scientifically of the cognitive process of dreaming will lead the neuroscientist the student of cognitive science and the general reader down different paths than expected into an exploration of the fuzzy and complex horizon between mind and brain The clearest presentation of research and philosophy currently available relating to the mind brain interface Discusses the cognitive processes of dreaming utilized in film and artificial intelligence Describes the functioning of dream in the creative process
