Cardiac Remodeling And Failure Progress In Experimental Cardiology:

Cardiac Remodeling and Failure Pawan K. Singal, Ian M.C. Dixon, Lorrie A. Kirshenbaum, Naranjan S.

Dhalla, 2012-12-06 According to the World Health Report 2000 <http://www.who.int> whr of the 55 million deaths worldwide in 1999 more than 16 million were secondary to cardiovascular complications. With the prospect of world population increasing from the current level of 6 billion to 9 billion by the middle of this century the burden of cardiac disease is going to increase astronomically. Furthermore, scientists are being challenged not only to reduce mortality but also to improve quality of life. Thus more than ever, intellectuals from different disciplines including biology, sociology, informatics, and health care have to join forces to meet the mandate. The World Heart Congress with a focus on Frontiers in Cardiovascular Health held in Winnipeg during July 6-11, 2001, made a unique attempt to bring these specialists together to brainstorm and map out the course of action for cardiovascular research and health in the next century. Anytime there is a relative increase in the workload on the heart, there are adaptive myocardial as well as humoral responses. When these adaptations or remodeling at the organ, subcellular, or gene level become inadequate for a proper tissue perfusion, the condition of heart failure ensues. Prevention of the factors leading to the relative increase in workload as well as a better understanding of the adaptive responses and their failure are some of the hopes to combat the morbidity and mortality due to heart failure. Cardiac Remodeling Barry Greenberg, 2005-09-29 Exploring the causes, mechanisms, and pathophysiology of cardiac remodeling, this reference offers detailed descriptions of the various components of the remodeling process as well as new therapeutic interventions and recent and future prospects for the treatment of cardiac remodeling. Pathophysiology of Cardiovascular Disease Naranjan S. Dhalla, Heinz Rupp, Aubie Angel, Grant N. Pierce, 2012-12-06 Pathophysiology of Cardiovascular Disease has been divided into four sections that focus on heart dysfunction and its associated characteristics: hypertrophy, cardiomyopathy, and failure; vascular dysfunction and disease; ischemic heart disease; and novel therapeutic interventions. This volume is a compendium of different approaches to understanding cardiovascular disease and identifying the proteins, pathways, and processes that impact it. *Advances in Animal Experimentation and Modeling* Ranbir Chander Sobti, 2021-12-08 Exploration in Laboratory Animal Sciences: Understanding Life Phenomena updates our knowledge about the newer technologies such as molecular biology, genomics, including sequencing, proteomics, transcriptomics, cell culture, stem cell culture, transgenesis, and their translation to understand systematics and phylogeny of laboratory animals at the molecular level. In seven sections, Exploration in Laboratory Animal Sciences: Understanding Life Phenomena resolves issues of conservation, applications in environment monitoring, production of drugs, and others. Comparative research has enabled use of domestic animal models that translate the advances in basic biosciences to the schemes for human welfare, including medicine. Molecular geneticists are unravelling the complexities of mammalian genes, and the field of biotechnology is maturing at a fast pace. Additionally, research focused on immunology and animal behavior offers new insight into ways of

enhancing animal welfare The rise in consumption of animal proteins in addition to the challenges of sustaining our natural resources has given animal scientists a vast array of opportunities to engage in integrative systems based research for meeting the challenges that behold us Exploration in Laboratory Animal Sciences Understanding Life Phenomena also discusses the manipulation of animals as factories for the production of safe foods drugs and sensors and others to meet the contemporary challenges faced by mankind in the new world order created by pandemic of Covid 19 It also includes several chapters on the causation and management of certain diseases and impact of microbes on life Provides insight to newer and futuristic technologies to understand disease process and drug design by animal models Addresses a wide variety of species and covers a wide variety of topics such as animal species the laboratory setting regulatory guidelines and ethical considerations to fully prepare for work with all types of animals Gives a perspective on laboratory animal use that allows to explain the benefits of animal use as required by veterinary technology program accreditation procedure Includes examples of animal bio technological techniques including stem cell and tissue engineering for their applications to humanity Offers new insight into ways of enhancing animal welfare by the inclusion of research results focused on immunology and laboratory animal behavior

Frontiers in Cardiovascular Health Naranjan S. Dhalla, Arun Chockalingam, H. Ivan Berkowitz, Pawan K. Singal, 2012-12-06 The Frontiers in Cardiovascular Health varies between and within nations depend ing upon the level at which the battle is fought for better cardiovascular health According to the 1997 World Health Report 15 million deaths i e 30% of the total number of deaths were attributable to cardiovascular diseases and this number is on the rise The projection for the year 2020 is quite alarming with an expected cardiovascular mortality reaching 50 million Much of this burden is projected to occur in developing countries more specifically in the most populous countries of the world namely China and India These countries are already burdened with infectious and parasitic diseases and are trying to eradicate such diseases With increasing life expectancies people all over the world especially in developing coun tries are exposed to degenerative atherosclerosis resulting in increased cardiovascu lar mortality and morbidity In developing countries resources available for health care are very limited For example many of the African countries spend less than 10 per person per year on his her entire health care let alone cardiovascular health The average health care budget for nearly two thirds of the global population is well below 100 per year on a per capita basis Therefore in developing countries health promotion and primary prevention are the frontiers by necessity Improving awareness and health education is not only a matter of choice but is an absolute necessity
