Cardiovascular Diseases Nikolaos Papageorgiou, 2016-08-05 Cardiovascular Diseases Genetic Susceptibility Environmental Factors and Their Interaction covers the special heritability characteristics and identifying genetic and environmental contributions to cardiovascular health This important reference provides an overview of the genetic basis of cardiovascular disease and its risk factors Included are important topics ranging from lifestyle choices risk factors and exposure to pollutants and chemicals Also covered are the influences of Mendelian traits and familial aggregation and the interactions and interrelationships between genetics and environmental factors which when compared provide a sound understanding of the interplay between inherited and acquired risk factors The book provides a much needed reference for this rapidly growing field of study By combining the latest research within the structured chapters of this reference a better understanding of genetic and environmental contribution to cardiovascular disease is found helping to substantiate further investigations in the field and design prevention and treatment strategies Provides an overview of the genetic basis of cardiovascular disease and its risk factors Reviews several large population based studies which indicate that exposure to several environmental factors may increase CVD morbidity and mortality exploring the plausibility of this association by data from animal studies Reflects on future studies to help understanding the role of genes and environmental factors in the development and progression of cardiovascular disease

Environmental Factors in the Pathogenesis of Cardiovascular Diseases Dragan M. Djuric, Devendra K. Agrawal, 2024-08-01 Environmental conditions and processes are one of the major pillars on which the human well being rests It is the core responsibility of the society to preserve and enhance better conditions for the human well being Indeed there are several evolving unmet needs in public health Emerging and re emerging infectious diseases and a surge in the incidence of non communicable diseases including cardiovascular diseases CAD chronic respiratory diseases and metabolic diseases have been impediments to sustainable well being Many factors are critical in the global surge in the rate and incidence of cardiovascular diseases These include the shift from acute to chronic conditions the shift from single risk factor vs multiple influences aging population global health disparities exposure to lower harmful influences over a longer period etc However the epigenetic factors due to unhealthy environment play a most significant role in the underlying pathogenesis of cardiovascular diseases Unfortunately this has been ignored for a long time and realized lately to expand and disseminate knowledge to general population expand research activities to investigate the cellular and molecular mechanisms and develop better preventive and treatment strategies The most significant environmental impoverishment in the pathogenesis of cardiovascular diseases include different genetical chemical physical and biological influences but not limited to socio economic status and lack of nutrients nutritional aspects including habits diets and additives inhaled and ingested pollutants exhaust gas and gasoline products tobacco smoke water pollution alcohol consumption soil and mineral pollution solvents pesticides microplastics non critical usage of drugs climate change extreme

atmospheric conditions extremes in noise and temperature electromagnetic influences microwaves and radiation outdoor light pollution mental stressors lack of or over exercise microbiota and microbiological agents like SARS CoV 2 virus etc

Neuropsychology of Cardiovascular Disease Shari R. Waldstein, Merrill F. Elias, 2015-02-11 Cardiovascular disease CVD is the leading cause of morbidity and mortality in the United States and most westernized nations Both CVDs and their risk factors confer substantial risk for stroke and dementia but are also associated with more subtle changes in brain structure and function and cognitive performance prior to such devastating clinical outcomes It has been suggested that there exists a continuum of brain abnormalities and cognitive difficulties associated with increasingly severe manifestations of cardiovascular risk factors and diseases that precede vascular cognitive impairment and may ultimately culminate in stroke or dementia This second edition examines the relations of a host of behavioral and biomedical risk factors in addition to subclinical and clinical CVDs to brain and cognitive function Associations with dementia and pre dementia cognitive performance are reported described and discussed with a focus on underlying brain mechanisms Future research agendas are suggested and clinical implications are considered The volume is a resource for professionals and students in neuropsychology behavioral medicine neurology cardiology cardiovascular and behavioral epidemiology gerontology geriatric medicine nursing adult developmental psychology and for other physicians and health care professionals who work with patients with or at risk for CVDs
