Cardiovascular And Respiratory Systems Modeling:

Cardiovascular and Respiratory Systems Jerry J. Batzel, Franz Kappel, Daniel Schneditz, Hien T. Tran, 2007-09-20

Cardiovascular and Respiratory Systems Modeling Analysis and Control uses a principle based modeling approach and analysis of feedback control regulation to elucidate the physiological relationships. Models are arranged around specific questions or conditions such as exercise or sleep transition and are generally based on physiological mechanisms rather than on formal descriptions of input output behavior. The authors ask open questions relevant to medical and clinical applications and clarify underlying themes of physiological control organization. Current problems, key issues, developing trends and unresolved questions are highlighted. Researchers and graduate students in mathematical biology and biomedical engineering will find this book useful. It will also appeal to researchers in the physiological and life sciences who are interested in mathematical modeling.

Mathematical Modeling and Validation in Physiology Jerry J. Batzel, Mostafa Bachar, Franz Kappel, 2012-12-14. This volume synthesizes theoretical and practical aspects of both the mathematical and life science viewpoints needed for modeling of the cardiovascular respiratory system specifically and physiological systems generally. Theoretical points include model design, model complexity and validation in the light of available data as well as control theory approaches to feedback delay and Kalman filter applications to parameter identification. State of the art approaches using parameter sensitivity are discussed for enhancing model identifiability through joint analysis of model structure and data. Practical examples illustrate model development at various levels of complexity based on given physiological information. The sensitivity based approaches for examining model identifiability are illustrated by means of specific modeling examples. The themes presented address the current problem of patient specific model adaptation in the clinical setting where data is typically limited.

Cardiovascular and Respiratory Systems Modeling, Analysis, and Control Franz Kappel, Jerry J. Batzel (Daniel Schneditz, Hien T. Tran), 2007. **Modelling, Simulation and Applications of Complex Systems** Mohd Hafiz Mohd, Md Yushalify Misro, Syakila Ahmad, Doanh Nguyen Ngoc, 2021-06-10. This book discusses the latest progresses and developments on complex systems research and intends to give an exposure to prospective readers about the theoretical and practical aspects of mathematical modelling, numerical simulation and agent based modelling frameworks. The main purpose of this book is to emphasize a unified approach to complex systems analysis which goes beyond to examine complicated phenomena of numerous real life systems. This is done by investigating a huge number of components that interact with each other at different microscopic and macroscopic scales. New insights and emergent collective behaviours can evolve from the interactions between individual components and also with their environments. These tools and concepts permit us to better understand the patterns of various real life systems and help us to comprehend the mechanisms behind which distinct factors shape some complex systems phenomena being influenced. This book is published in conjunction with the International Workshop on Complex Systems Modelling Simulation 2019 CoSMoS.
