Agent-Based Simulation of Vulnerability Dynamics Cilli Sobiech, 2012-10-11 This thesis constitutes an extraordinary

innovative research approach in transferring the concepts and methods of complex systems to risk research. It ambitiously bridges the barriers between theoretical, empirical and methodical research work and integrates these fields into one comprehensive approach of dealing with uncertainty in socio-ecological systems. The developed agent-based simulation aims at the dynamics of social vulnerability in the considered system of the German North Sea Coast. Thus, the social simulation provides an analytical method to explore the individual relational and spatial aspects leading to dynamics of vulnerability in society. Combining complexity science and risk research by the method of agent-based simulation hereby emphasizes the importance of understanding interrelations inside the system for the system's development, i.e. for the evolving. Based on a vulnerability assessment regarding vulnerability characteristics, present risk behavior and self-protection preferences of private households against the impacts of flooding and storm surges, possible system trajectories could be explored by means of simulation experiments. The system-analytical approach therefore contributes to an integrated consideration of multi-dimensional and context-sensitive social phenomena such as vulnerability. Furthermore, it achieves conceptually and strategically relevant implications for risk research and complex systems research.

The Future of Post-Human Formal Science Peter Baofu, 2010-02-19. What exactly is so appealing in formal science such that its influence can be seen in numerous disciplines nowadays for practical purposes like better functionality, performance and so on, as Pythagoras already famously said in antiquity: "Number is the ruler of forms and ideas and the cause of gods and demons." This contemporary addiction to practical convenience in formal science has turned a blind eye to its other side, which has impoverished both our knowledge of reality and the well-being of our lifeworld. Contrary to conventional wisdom, the other side of this appealing addiction has yet to be comprehensively understood, nor has the fact that its practical convenience is neither possible nor desirable to the extent that the proponents of formal science would like us to believe. Needless to say, this by no means suggests that formal science should not be used for practical purposes or that the literature in formal science and other related fields like computer science, information theory, microeconomics, decision theory, statistics and linguistics, just to cite a few of them, should be dismissed. Of course, neither of these two extreme views is reasonable. Instead, this book provides an alternative, better way to understand the nature of formal science, especially in relation to systems theory, for practical convenience while learning from different approaches in the literature but without favoring any one of them nor integrating them, since they are not necessarily compatible with each other. In the end, this book offers a new theory to transcend the existing approaches in the literature in a new direction not thought of before. This seminal project is to fundamentally alter the way that we think about formal science from the combined perspectives of the mind, nature, society and culture, with enormous implications for the human future and what I originally called its post-human fate.

Fuzzy Planning Gert de Roo, Geoff Porter, 2016-04-15. Many of the key notions associated with spatial planning are essentially fuzzy in their nature. For example, while almost everyone accepts sustainability as an important goal of planning, the actions of the actors involved

can render the achieved sustainability minimal or even counterproductive Putting forward an innovative way of looking at planning problems and policies this volume suggests actor consulting is important in addressing the fuzzy nature of planning A tool to address differences in understanding actor consulting is based on an analysis of actor motives perceptions and contributions By inviting all actors to express their desired actual and potential contributions to achieving an agreed outcome to a local policy issue decision makers have a means to develop their goals in line with the roles motivation perception and behaviour of the various actors involved Including contributions from Patsy Healy Johan Woltjer Don Miller and Karel Martens the book presents a variety of case studies which demonstrate the use of the actor consulting model in addressing planning issues

Knowledge Matters Richard E. Lee, 2017-07-05 Economic changes and political changes which emerged with the modern capitalist world economy were accompanied in the sociocultural domain by changes in the structures of knowledge These included the hierarchical separation of the realm of facts from that of values institutionalized as a division between the sciences and the humanities The social sciences responded to contradictions inherent in this structure over the nineteenth century in producing knowledge on which policy decisions could be based The problems of the contemporary period indicate we are in a long term structural crisis Nowhere is this more apparent than in the theoretical frameworks and methodological approaches through which social analysts and observers alike seek to understand the world Since the 1960s developments in the field of knowledge especially two movements complexity studies in the natural sciences and cultural studies in the humanities have contested the naturalized essentialist boundaries separating the sciences the social sciences and the humanities The primary rationale for this work is to recognize the inseparable whole composed of the material structures of the world and the structures of knowledge that govern what actions may be deemed legitimate and effective Knowledge Matters discusses what actions will actually be undertaken by social agents and what such an approach means for an analysis of the present situation in terms of imagining and evaluating possible futures

Power and Security in the Information Age Myriam Dunn Cavelty, Victor Mauer, 2016-03-23 The marriage of computers and telecommunications the global integration of these technologies and their availability at low cost is bringing about a fundamental transformation in the way humans communicate and interact But however much consensus there may be on the growing importance of information technology today agreement is far more elusive when it comes to pinning down the impact of this development on security issues Written by scholars in international relations this volume focuses on the role of the state in defending against cyber threats and in securing the information age The manuscript is captivating with the significance and actuality of the issues discussed and the logical knowledgeable and engaged presentation of the issues The essays intrigue and provoke with a number of fresh hypotheses observations and suggestions and they contribute to mapping the diverse layers actors approaches and policies of the cyber security realm
