The Case of the Green Turtle Alison Rieser, 2012-07-15 The true story of the controversial battle to save the world's most famous endangered species The journals of early maritime explorers traversing the Atlantic Ocean often describe swarms of sea turtles once a plentiful source of food Many populations had been decimated by the 1950s when Archie Carr and others raised public awareness of their plight One species the green turtle has been the most heavily exploited due to international demand for turtle products especially green turtle soup The species has achieved some measure of recovery due to thirty years of conservation efforts but remains endangered In The Case of the Green Turtle Alison Rieser provides an unparalleled look into the way science and conservation interact by focusing on the most controversial aspect of green turtle conservation farming While proponents argued that farming green sea turtles would help save them opponents countered that it encouraged a taste for turtle flesh that would lead to the slaughter of wild stocks The

clash of these viewpoints once riveted the world Rieser relies on her expertise in ocean ecology policy and law to reveal how the efforts to preserve sea turtles changed marine conservation and the way we view our role in the environment Her study of this early conservation controversy will fascinate anyone who cares about sea turtles or the oceans in which they live

Ethology and Behavioral Ecology of Sirenia Helene Marsh, 2022-05-09. Despite their rich fossil history, there are only four surviving species of sirenians or sea cows, the only fully aquatic herbivorous mammals. The three species of manatees and the dugong live in the coastal waters, rivers, and lakes of more than 80 tropical and subtropical countries and are all on the IUCN Red List of Threatened Species. This book examines sirenian conservation biology through the lens of their behavioral ecology and ethology. Sirenian feeding, diving, movement, social, and reproductive behaviors are reviewed by an international team of scientists from eight countries, with an emphasis on data gathered in the past 15 years. *Proceedings of the Twentieth Annual Symposium on Sea Turtle Biology and Conservation, 29 February Through 4 March 2000, Orlando, Florida, U.S.A.* Andrea Mosier, Allen Michael Foley, Beth Brost, 2002.
