Cardiac-Vascular Remodeling and Functional Interaction Yukio Maruyama,Masatsugu Hori,Joseph S. Janicki,2013-04-17
Cardiac performance is regulated not only by cardiac muscle properties but also by several other factors including those associated with the neurohumoral system and the mechanical characteristics of the peripheral circulation New information concerning these regulatory factors has furthered our understanding of the pathophysiology of cardiac dysfunction However controversy remains along with a need to integrate these multidisciplinary findings It was with this in mind together with my continuing interest in the response of the normal and diseased heart to variations in loading conditions that the satellite symposium entitled Interactions Between Cardiac Function and Vascular Dynamics was organized and dedicated to my mentor Dr T Takishima The symposium was held in Fukushima Japan in 1992 following the Tenth International Conference of the Cardiovascular Systems Dynamics Society in Kobe Japan which was organized by the then president of the society Dr Masatsugu Hori The Fukushima symposium and the Kobe conference were stimulating and informative To commemorate these events Dr Hori Dr Janicki and I decided to publish this book It covers topics that were presented then as well as pertinent new material As a result the book includes not only updated reviews but also up to date findings that were not considered at the two scientific sessions The high level attained in this book is due to the outstanding contributions from internationally renowned scientists This final product of their efforts should prove to be a valuable source of information to the reader
