Edwards, 2002-11-14 Reviews the best therapies and surgical techniques available to provide quality care for the elderly cardiac patient and of those areas that require further research The authors detail preventive therapies and the cardiovascular syndromes that disproportionately afflict the older individual including arrhythmias particularly atrial fibrillation syncope heart failure particularly diastolic heart failure and ischemic heart disease They also delineate the surgical management of the heart patient with discussions of postoperative management and its complications and of specific surgical procedures such as coronary artery bypass grafting valve surgery pacemaker and defibrillators and surgical management of heart failure

Cardiovascular Disease in the Elderly Gary Gerstenblith, 2007-11-03 A panel of clinicians researchers and leaders in the field review and discuss the latest findings on the pathophysiology diagnosis and management of cardiovascular disease in the older patient The authors explain the physiological changes associated with the normal aging process that may lead to the development of disease to adverse consequences once disease develops and which alter the risk benefit equation for medical and other interventions designed to diagnose assess and treat cardiovascular disease The focus is on particularly common syndromes in the elderly including cardiac failure with normal ejection fraction isolated systolic hypertension and atrial fibrillation Wherever possible the authors take an evidence based approach to recommendations and rely heavily on prospective clinical trials **Contemporary Geriatric Medicine** Steven Gambert, 2012-12-06 This volume marks the first of a new series Contemporary Geriatric Medicine joining the ever growing Contemporary family As with the other Contemporary volumes our goal is to assist the reader in maintaining currency in a rapidly changing field Perhaps no field has shown such major advances in such a short time as geriatrics Over the last several years the demographic imperative has become a source of concern for many including clinicians scientists economists and health planners Our geriatric knowledge base

continues to grow often making it difficult to keep abreast of advances and current therapeutic modalities Contemporary Geriatric Medicine presents the state of the art thinking regarding a variety of topics all of major concern to the health practitioner caring for the elderly person The authors for the most part serving as members of a stable editorial board have chosen topics that should have immediate interest to the readership By having a stable editorial board continuity is ensured in successive volumes Every two years a subsequent issue will either address new thoughts on already presented topics or focus on new topics of current interest As with the other Contemporary series volumes the every other year interval is intended to allow new findings to develop and be tested It also provides the authors with time to provide the highest quality of work

Contemporary Geriatric Medicine Steven R. Gambert, 2012-12-06 This volume is the third in the Contemporary Geriatric Medicine series As in previous volumes information is presented in the form of easy to read essays to bring the reader up to date on state of the art developments in the area of geriatric medicine Once again a system approach is utilized In addition several new topics including alcoholism thromboembolic disease and decubitus ulcer management have been introduced to enhance this volume's usefulness to the busy clinician and student Each chapter is not meant to be an exhaustive review of all topics in the field but rather to focus on issues currently receiving a great deal of attention Our goal continues to be to create an exciting approach to contemporary issues in geriatric medicine The editors are once again appreciative for having been given the opportunity to develop this series Appreciation is also expressed to our professional colleagues families and administrative assistants who have enabled this volume to reach fruition As in the past we thank most of all our elderly patients for providing the inspiration and impetus to improve our knowledge and understanding of the health care needs of the elderly Steven R Gambert M D V alhalla New York ix Contents Chapter 1 Geriatric Cardiology and Blood Pressure 1 Edmund H Duthie Jr and Michael H Keelan Jr

Contemporary Concepts in Cardiology Richard Gorlin, George D. Dangas, Pavlos K. Toutouzas, M.M. Konstadoulakis, 2012-12-06 In the era of instant global communication medicine is an international discipline characterized by a wide range of patient referral systems world wide discussion of clinical and research findings and an explosion in the medical literature Perhaps no field has progressed more than cardiology in the past few years Contemporary Concepts in Cardiology has been conceived as a supplement to the classic cardiology textbooks for the use of practicing physicians cardiologists in training medical students and research investigators This volume focuses on associations between refinements in the understanding of disease and clinical applications The material is presented in a way that limns the latest advances and focuses thinking towards future developments in cardiology The Editors have assembled a respected international panel of contributors so that each chapter is authored by a well known specialist in his or her field Every attempt was made to avoid the fragmentation which often characterizes the digest approach Because the constant flow of information makes it nearly impossible to construct a timely book on advances in cardiology the chapters in this volume describe the current concepts in cardiology and their underlying rationale rather than

attempting a comprehensive review of the most recent papers in each discipline Heart Disease Diagnosis and Therapy M. Gabriel Khan, 2007-10-27 M Gabriel Khan MD concisely assembles in a reader friendly format all the clinically useful information that an internist needs in both his daily rounds and busy office practice to find correct clinical diagnoses and choose optimal pharmacologic therapies for their patients Highlights include a simplified method for recognition of and a practical therapeutic approach to arrhythmias as well as a more logical approach to drug management of hypertension than that given by the Joint National Committee instructive algorithms that simplify the diagnosis and treatment of syncope and extensive diagnostic information on hypertrophic cardiomyopathy A large number of illustrative electrocardiograms that help to clarify the most often misinterpreted of all cardiologic tests and extensive discussions of practical cardiovascular pharmacology complete this magisterial survey Frailty and Cardiovascular Diseases Nicola Veronese, 2020-01-01 This book aims to clarify the potential association between frailty and cardiovascular disease in older people Covering the biological as well as the clinical point of view it allows researchers and clinicians to discover the significance of this topic The contributions cover the most important aspects in the potential relationship between frailty and cardiovascular disease In particular authoritative authors in this field have clarified the definition and the epidemiology of frailty and cardiovascular disease in older people A large part of the volume is dedicated to the biological mechanisms of frailty and cardiovascular disease trying to find those in common between these two conditions Since this book is dedicated to both researchers and clinicians we have proposed some chapters to the importance of comprehensive geriatric assessment in the evaluation and treatment of cardiovascular diseases and frailty In this regard the importance of geriatric evaluation in cardiac surgery for older people is well covered Finally the importance of cardiac rehabilitation and physical exercise is summarized being actually the most important treatments for both frailty and cardiovascular disease Written by many well known and widely published experts in their respective fields this book will appeal to a wide readership such as researchers in the field and clinicians especially suited in geriatric medicine and cardiology who every day face frail older patients Tresch and Aronow's Cardiovascular Disease in the Elderly Wilbert S. Aronow, Jerome L. Fleg, Michael W. Rich, 2019-02-06 With an exponential growth in the number of older adults understanding the common disorders of the elderly patient requiring cardiac care is becoming increasingly important Incorporating recent advances in the field Tresch and Aronow's Cardiovascular Disease in the Elderly 6th Edition has been completely revised and updated to provide cardiologists primary care physicians geriatricians and other clinicians caring for the elderly a comprehensive and accessible overview of the epidemiology pathophysiology and treatment of cardiovascular disorders in older patients **Neuropsychology and Cardiovascular Disease** Ronald A. Cohen, John Gunstad, 2010 Roughly one of every three Americans has some form of cardiovascular disease CVD including more than 70% of persons older than 75 years of age Long associated with increased risk for mortality and disability CVD is also a major risk factor for stroke and cerebrovascular disease There has been

growing consensus that CVD is also an important contributor to poor neurocognitive outcome in old age. Numerous studies now link CVD to accelerated cognitive decline and structural and functional brain abnormalities including neurodegenerative conditions in the elderly. While vascular dementia is the most obvious example of severe brain dysfunction directly tied to chronic vascular disease, evidence is also mounting that Alzheimer's disease may be linked to some of the same pathophysiological mechanisms that underlie cardiovascular disease. This book was written to provide up-to-date insight into these heart-brain connections and the neuropsychology of CVD. Highlights include: Controversies in vascular dementia and vascular cognitive impairment (VCI); Effects of aging on cerebral hemodynamics and autoregulation; How blood vessel function contributes to cognitive decline; Updates on the cognitive impact of cardiosurgical procedures; Neurocognitive aspects of heart failure; Neuropsychological evaluation of persons with CVD; Mechanisms by which neurological changes produce cardiac dysfunction; Recent findings in the structural and functional neuroimaging in CVD. Both clinicians and researchers in neuropsychology, health psychology, cardiology, neurology, psychiatry, geriatrics, and many others will find this book an important resource.
