Changing Sexual Values And The Family:

Changing Sexual Values and the Family G. Pirooz Sholevar, 1977 **Dynamics of Values in Fertility Change** Richard Leete, 1999-04-01 The global transformation in the number of children women bear has been one of the most remarkable changes in social behaviour in the twentieth century The search for explanations of the causes in childbearing behaviour and particularly in the values attached to children remains a central research preoccupation of population scientists This book explores the dimensions of values identified as significant in their impact on fertility decisions It offers a range of perspectives on a mosaic of values perceived to be of importance in influencing the bearing and caring of children The book examines the macro and micro theories of the value of children and considers the multi dimensional nature of value change The chapters explore the nature of the mechanisms by which value change may serve to reinforce or promote the ideational essence of change and the impact of pressures for change It is observed that gender religion and culture all function as complementary lenses through which the necessity of value maintenance or modification is viewed The book concludes that fertility behaviour is value driven but that fertility change is not necessarily driven by value change The values of most significance to fertility are more fundamental and general values rather than explicit fertility values [Changing Britain](#) Susan McRae, 1999 Major changes have happened in households and people s lives in most countries in the developed world Marriage rates have fallen divorce has risen women are having fewer children and later in life and there has been a rise in childbearing outside marriage One in four families is headed by a lone parent We are all getting older These changes have significance that goes beyond the individual families with implications for housing demand social security benefits labour force participation health and social services *Changing Britain* provides a comprehensive portrait of British families and households at the end of the 20th Century The book examines more generally the nature of economic and labour market change Britain s place in Europe and changing attitudes towards family life Specifically the book also deals with issues such as older people s lives non heterosexual families one person households young mothers and single parents and divorce
