Celestial Navigation:

Primer of Celestial Navigation John Favill, 1940 Celestial Navigation in the GPS Age John Karl, 2007 Many books on celestial navigation take shortcuts in explaining concepts incorrect diagrams and discussion are often used for the sake of moving the student along quickly This book tells the true story and the whole story It conveys celestial navigation concepts clearly and in the shortest possible time It s tailored for navigation in the GPS age a time of computers calculators and web resources Although it covers all of the traditional methods of working a sight the primary thrust is using the under 10 scientific calculator By using equations that you key into your calculator this book guides you toward a better understanding of the concepts of celestial navigation You will learn novel ways to plot lines of position ways to check your sextant accurately by star sights and how to tell what time it is from a moon sight The many appendices are a treasure of references and explanations of abstract ideas Celestial Navigation is a crucial skill for the offshore navigator to know this book provides the shortest path to that knowledge **Taking the Stars** Peter Ifland, 1998 This text focuses on the history of the development of hand held celestial navigation instruments offering descriptions of the tools used It also includes a glossary of technical terms **Simplified Celestial Navigation** Philip Van Horn Weems, Edwin Albert Link, 1940 Celestial Navigation Jeff Toghill, 1986-06-03 To the uninitiated celestial navigation appears to be a somewhat frightening exercise in mathematics In fact the maximum mathematics involved in the new sight reduction systems is the addition of three lines of figures Similarly the apparent complexities of the solar and stellar systems take on a less frightening appearance when related to the lighthouses and similar earthly objects used for coastal navigation Throughout this book the author uses such a comparison between earthly and heavenly objects in explaining the close relationship between coastal and celestial navigation In doing so he reduces a complex subject to a simple and interesting one that can be absorbed by even the most non mathematically minded The book concentrates for much of its length on the plotting of the boat s position by sun planets and stars when out of sight of land It also deals with related navigational routines such as checking the compass by using heavenly objects taking radio time signals and adjusting the sextant for day to day corrections This is celestial navigation in its simplest form presented in a way which even the most amateur navigator can understand and absorb Celestial Navigation in a Nutshell Hewitt Schlereth, 2000-07-15 Despite the proliferation of electronic navigational devices celestial navigation remains an essential tool for those who do not wish to be caught short when modern technology fails In this easy to use guide Hewitt Schlereth explains clearly and concisely how to navigate any stretch of sea using only a handheld sextant a watch a plotting sheet and a copy of the Nautical Almanac The basic process is simple take a sight with a sextant establish a secondary reference or benchmark sight compare the two and plot the result of the comparison on a chart Celestial Navigation in a Nutshell demonstrates how to take sights by the sun moon stars and planets discussing the advantages and disadvantages of each method The reader is taken carefully through several examples and situational illustrations making this a most effective

self teaching guide Common errors are reviewed and several tips on how to improve accuracy are given **The Practical Guide to Celestial Navigation** Phil Somerville,2021-10-14 THIS EBOOK EDITION IS DESIGNED TO BE EXPERIENCED ON COLOUR DEVICES The practical guide to celestial navigation know what to do step by step understand why you re doing it and be confident that you can put it into practice when on board Did you know that a person standing on the equator is effectively travelling at 900mph And did you know that you can use this information to work out where you are in the world to an accuracy of about 3 or 4 miles No GPS no computers Just a sextant some tables from an Almanac and the knowledge in this book It s the only back up if the GPS goes down so it s a matter of safety If you want to qualify as a commercial skipper superyacht captain you need to know how to carry out celestial navigation And if you want to pass the RYA Ocean YachtmasterTM exam you need to know it too It s a major stumbling block for many sailors wanting or needing to take their next qualifications and the other books on the market are complex and often assume some prior understanding This book fulfils the need for a clear explanation of celestial navigation illustrated with colour diagrams and including unique checklist sheets to enable you to repeat all those calculations you learned back at home when you re on deck Without overwhelming the reader with a load of theory from the off the author breaks down what you need to do step by step explaining why at every point giving the information context and making it more interesting and memorable He has trained students in this subject for years and here he s able to use his experiences of what works and what are the common pitfalls he even includes a troubleshooting chapter near the end going through errors commonly made and how to spot them The objective is that readers will finish the book not only knowing what to do but really understanding why and being able to make sense of it all again later rather than just getting through and exam and finding themselves at a loss when on deck The author also includes time tested proformas quick reference sheets that sailors can refer to when they come to putting the theory into practice on board avoiding the terrifying cold start that most sailors experience when they suddenly need to put their theoretical knowledge to the test in the real world Celestial Navigation Dominique F. Prinet,2014-07-18 This manual has grown out of all the courses given by Dominique Prinet a certified Instructor Evaluator for Sail Canada who has been teaching celestial navigation since 2000 It has benefitted from the thoughtful contributions of over 100 students The aim of Celestial Navigation is to give a sufficient grounding in the subject to determine position at sea using a sextant for fixes on the sun moon stars and planets Furthermore the material presented will prepare a reader who wishes to pursue a Celestial Navigation Certificate through self study The subject requires some comfort with the basic concepts of navigation but the prospective navigator only needs to know how to add and subtract either times or angles Lucid and well paced Celestial Navigation starts with fundamentals and definitions which ensure that a motivated student need not bring anything more to the table than his or her willingness to master the subject Richly illustrated it includes a chapter with more than forty pages of review exercises covering all topics T he cleverness of many of the concepts explained here will bring about great
