

LANDFORMS READING TEXT AND ACTIVITIES

WATERFALLS
NATURE'S OUTDOOR SCHOOL

Waterfalls can be one of the most spectacular landforms. They are a place where running water from a river makes a drop. This usually happens over a cliff. The water scours away the rock below often creating a deep pool.

Where Are Waterfalls Found?

Waterfalls are not found everywhere on Earth. Deserts do not have waterfalls. Sea-covered areas and plains do not allow waterfalls to form. They are generally found near the coast or in the high mountains.

How Are Waterfalls Made?

The water flows over the edge carrying the sand and rocks. These rub against the rocks and wear them away. It forms a pool at the bottom.

Waterfalls can also form because of earthquakes, landslides, volcanoes or glaciers. These can all create cliffs that water can run over.

Types Of Waterfalls

There are different types of waterfalls. Based on how the water falls down.

- Some waterfalls are so powerful that they can move boulders or trees.
- Some waterfalls are made of ice.
- Some waterfalls are made of snow.
- Some waterfalls are made of lava.

Why Are Waterfalls Important?

- They can create electricity.
- The area around the waterfall is often cooler. This makes it good to grow food.
- They add oxygen to the water, fish live in the water. This creates food for people living near it.
- They are also natural attractions.

What Is A Threat To Waterfalls?

- Drought means that there is less water.
- Creating dams or changing the river flow.
