Structural Dynamics Fundamentals and Advanced Applications, Volume II Alvar M. Kabe, Brian H.

Sako, 2020-07-02 The two volume Structural Dynamics Fundamentals and Advanced Applications is a comprehensive work that encompasses the fundamentals of structural dynamics and vibration analysis as well as advanced applications used on extremely large and complex systems In Volume II d Alembert s Principle Hamilton s Principle and Lagrange s Equations are derived from fundamental principles Development of large structural dynamic models and fluid structure interaction are thoroughly covered Responses to turbulence gust buffet and static aeroelastic loading encountered during atmospheric flight are addressed from fundamental principles to the final equations including aeroelasticity Volume II also includes a detailed discussion of mode survey testing mode parameter identification and analytical model adjustment Analysis of time signals including digitization filtering and transform computation is also covered A comprehensive discussion of probability and statistics including statistics of time series small sample statistics and the combination of responses whose statistical distributions are different is included Volume II concludes with an extensive chapter on continuous systems including the classical derivations and solutions for strings membranes beams and plates as well as the derivation and closed form solutions for rotating disks and sloshing of fluids in rectangular and cylindrical tanks Dr Kabe s training and expertise are in structural dynamics and Dr Sako s are in applied mathematics Their collaboration has led to the development of first of a kind methodologies and solutions to complex structural dynamics problems Their experience and contributions encompass numerous past and currently operational launch and space systems The two volume work was written with both practicing engineers and students just learning structural dynamics in mind Derivations are rigorous and comprehensive thus making understanding the material easier Presents analysis methodologies adopted by the aerospace community to solve complex structural dynamics problems

Theory of Vibration Protection Igor A. Karnovsky, Evgeniy Lebed, 2016-05-09 This text is an advancement of the theory of vibration protection of mechanical systems with lumped and distributed parameters The book offers various concepts and methods of solving vibration protection problems discusses the advantages and disadvantages of different methods and the fields of their effective applications Fundamental approaches of vibration protection which are considered in this book are the passive parametric and optimal active vibration protection The passive vibration protection is based on vibration isolation vibration damping and dynamic absorbers Parametric vibration protection theory is based on the Shchipanov Luzin invariance principle Optimal active vibration protection theory is based on the Pontryagin principle and the Krein moment method The book also contains special topics such as suppression of vibrations at the source of their occurrence and the harmful influence of vibrations on humans p Numerous examples which illustrate the theoretical ideas of each chapter are included This book is intended for graduate students and engineers It is assumed that a reader has working knowledge of theory of vibrations differential equations and complex analysis About the Authors Igor A

Karnovsky Ph D Dr Sci is a specialist in structural analysis theory of vibration and optimal control of vibration He has 40 years of experience in research teaching and consulting in this field and is the author of more than 70 published scientific papers including two books in Structural Analysis published with Springer in 2010 2012 and three handbooks in Structural Dynamics published with McGraw Hill in 2001 2004 He also holds a number of vibration control related patents Evgeniy Lebed Ph D is a specialist in applied mathematics and engineering He has 10 years of experience in research teaching and consulting in this field The main sphere of his research interests are qualitative theory of differential equations integral transforms and frequency domain analysis with application to image and signal processing He is the author of 15 published scientific papers and a US patent 2015
