Complexity Science Peter Belohlavek:

Complexity Science Peter Belohlavek, 2011-07 These books were written as consultation books to be used to solve problems They are essentially analogous to medical books for individuals who decided to manage the concepts and fundamentals of things in order to manage the root causes of problems Complexity Sciences deal with the research of adaptive systems and environments The unicist approach to complexity sciences implies the discovery of the ontological structure of a reality and the objects that integrate it defining the ontological algorithm and then the actions that can be done to influence such reality

Unicist R&D of Adaptive Systems in Business Peter Belohlavek, 2012-03-19 This book is focused on the R D of the adaptive systems of businesses in order to develop and design solutions for them It provides the technology to research and develop solutions for growth innovation and improvement of business processes It integrates applied research and architectural design It starts with a research process where the solutions need to be confirmed and ends with a design process developing the architecture of a business business process or business unit The research process is homologous to the clinical trials that are developed in medicine What needs to be confirmed is the efficacy the solution provides the security and safety of the process and the side effects the solution produces The solution needs to be considered as a unified field with the system in order to confirm the validity of the remedy The first step of an R D process is being able to apprehend the unified field of a business After this has been achieved a diagnosing process can begin This work shows that the solution has to be designed and built considering its utility aesthetics and solidity That is why an extreme design process is used Unicist XD that includes several pilot tests to ensure the functionality of the solution

The Ontogenesis of Knowledge Acquisition Peter Belohlavek, 2011-07. These books were written as consultation books to be used to solve problems. They are essentially analogous to medical books for individuals who decided to manage the concepts and fundamentals of things in order to manage the root causes of problems. When we talk about the ontogenesis of knowledge acquisition, we mean the natural steps that need to be considered when learning or when a learning process for other is being designed. Knowledge can only be acquired when individuals have made a conscious decision to learn something.

Robot Thinking: The Nature of Automation Peter Belohlavek, 2011-09-07. These books were written as consultation books to be used to solve problems. They are essentially analogous to medical books for individuals who decided to manage the concepts and fundamentals of things in order to manage the root causes of problems. This book is about robotics, perhaps the hardest aspect of automation processes. But it also includes its softest side, the human being. It describes conceptual structures using unicist technologies. These technologies are homologous to the conceptual engineering solutions developed at the University of Osaka.

Unicist Business Architecture Peter Belohlavek, 2012-03-19. This book proposes to enter the world of unicist business architecture in order to be able to transform the idea of the concept of a business into business processes. This implies the integration of diagnoses, strategies, and architecture. Unicist Business

Architects need to integrate the facts of a business and of its contexts with the needs of customers stakeholders and shareholders and with the possibilities of the available technologies This implies necessarily the use of creativity Business architects need to go beyond factual knowledge in order to use their art to develop solutions that go beyond an if and then thinking process The nature of architects can be defined by the integration of their need to do the focus on what is being built their inner freedom in order to be able to use their art with a natural credibility in order to start by believing to see to imagine solutions that are not preexisting This book is for individuals who are responsible for designing business architecture They are the ones that need to be able to apprehend diagnoses and strategies considering their fundamental and technical analytical aspects This book provides the necessary ontogenetic maps to design and build the business architecture The Ontogenesis of Evolution Peter Belohlavek,2011-07 These books were written as consultation books to be used to solve problems They are essentially analogous to medical books for individuals who decided to manage the concepts and fundamentals of things in order to manage the root causes of problems The unicist ontology of evolution explains and predicts the evolution of living beings their produces and their actions in a unified field ruled by concepts and their natural laws These natural laws have been named as Ontogenetic Intelligence This evolutionary approach enables the analysis of and influence upon complex realities **Design of Complex Systems Research** Peter Belohlavek,2008-01-02 If you need to deal with complex problems this book will open a door and widen your possibilities to influence them Complex systems research methodologies used until today include both intuitive and mathematical approaches to approximate solutions The unicist approach to complexity using ontology based logical inferences made the solution of complex problems understandable reasonable and provable This R D e book will give you an introduction to the unicist approach to complexity research The final goal of a diagnosis is to influence reality To do so the researcher needs to explain it but the explanation is only a comprehension framework to exert influence on the environment under study The research that merely tries to explain a situation becomes an end in itself and therefore tends to be fallacious All reality that operates as a complex system needs to be approached as a unified field The unified field is not susceptible to division into variables Division is only possible when dealing with a non complex system A complex system can only be studied as a unit A very strict methodology forecast and validation falsification are required to avoid falling into fallacies that will lead into erroneous diagnoses This work provides a list of actions to design the research that would permit to diagnose complex problems It includes the unicist ontology of complex systems research
