Compositional and Failure Analysis of Polymers John Scheirs, 2000-10-03 Intended as a practical guide for polymer technologists engineers and analysts in the plastics composites and rubber fields this title describes a range of techniques and strategies for compositional and failure analysis of polymeric materials and products Numerous examples illustrate the application of analytical methods for solving commonly encountered problems in the polymer industry The reader is guided towards the most appropriate method of analysis and measurement and the most likely reasons for the failure Areas covered include Migration and interaction of additives Mechanical stress and stress cracking Crazing and fracture Residual stress and weld lines Contamination and discoloration Numerous pedagogical methods illustrative flow diagrams figures and tables are used throughout the text to make it an invaluable guide to all analysts and polymer engineers in industrial or academic laboratories

Molecular Characterization and Analysis of Polymers John M. Chalmers, Robert J. Meier, 2008-12-09 Written by expert contributors from the academic and industrial sectors this book presents traditional and modern approaches to polymer characterization and analysis The emphasis is on pragmatics problem solving and property determination real world applications provide a context for key concepts The characterizations focus on organic polymer and polymer product microstructure and composition Approaches molecular characterization and analysis of polymers from the viewpoint of problem solving and polymer property characterization rather than from a technique championing approach Focuses on providing a means to ascertaining the optimum approach or technique s to solve a problem measure a property and thereby develop an analytical competence in the molecular characterization and analysis of real world polymer products Provides background on polymer chemistry and microstructure

discussions of polymer chain morphology degradation and product failure and additive analysis and considers the supporting roles of modeling and high throughput analysis **Compositional Analysis by Thermogravimetry** Charles Mansfield Earnest, ASTM Committee E-37 on Thermal Measurements, 1988 **Polymer Reactor Engineering** C. McGreavy, 2012-12-06 Approximately half of the world production of the petrochemical industry more than 100 million tonnes is in the form of polymers yet it would probably surprise most people to learn how much their lifestyle depends on polymers ranging as they do from detergents kitchenware and electrical appliances to furnishings and a myriad other domestic goods Still less are they likely to be aware of the extensive part they play in engineering applications for mechanical machine components and advanced high performance aircraft This versatility derives from the fact that polymeric materials are made up of a range of molecules of varying length whose properties are related to molecular structure and the proportions of the chains in the mixture For example polypropylene is a commodity polymer which is produced in hundreds of different grades to meet specific market requirements This depends on the catalyst as well as the operating conditions and reactor design A major area for growth is in substituting polymers for conventional materials such as ceramics and metals Not only can they match these materials in terms of mechanical strength and robustness but they have very good resistance to chemical attack Polyamides for example are widely used for car bumpers and new polymers are being developed for engine manifolds and covers In 1993 there is typically 100 kg of various polymers used in cars and this is continually increasing giving a net weight reduction and hence better fuel economy **Applied Research on Polymer Composites** Pooria Pashakhsh, Gennady E. Zaikov, 2015-02-25 This new volume presents leading edge research in the rapidly changing and evolving field of polymer science as well as on chemical processing The topics in the book reflect the diversity of research advances in the production and application of modern polymeric materials and related areas focusing on the preparation characterization and application

Applications of Biodegradable and Bio-Based Polymers for Human Health and a Cleaner Environment Iuliana Stoica, Omari Mukbaniani, Neha Kanwar Rawat, A. K. Haghi, 2021-12-22 The world faces significant challenges as the population and consumption continue to grow while nonrenewable fossil fuels and other raw materials are depleted at ever increasing rates This informative volume provides a technical approach to address these issues using green design and analysis It takes an interdisciplinary look at concepts that can be applied across engineering disciplines in the development of products processes and systems to minimize environmental impacts across all life cycle phases Topics include polymers for pollutant removal wood based biopolymers bio based polymers for drug formulations biomaterial based medical implants biodegradability of biopolymer materials bio based polymers for food packaging applications biodegradable polymers for tissue engineering applications and more *Rubber Analysis Characterisation, Failure Diagnosis and Reverse Engineering* Mr. Rohit Manglik, 2024-01-03 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla
