Computational Geometry In C Cambridge Tracts In Theoretical Computer Science:

Computational Geometry in C Joseph O'Rourke, 1998-10-13 This is the revised and expanded 1998 edition of a popular introduction to the design and implementation of geometry algorithms arising in areas such as computer graphics robotics and engineering design The basic techniques used in computational geometry are all covered polygon triangulations convex hulls Voronoi diagrams arrangements geometric searching and motion planning The self contained treatment presumes only an elementary knowledge of mathematics but reaches topics on the frontier of current research making it a useful reference for practitioners at all levels The second edition contains material on several new topics such as randomized algorithms for polygon triangulation planar point location 3D convex hull construction intersection algorithms for ray segment and ray triangle and point in polyhedron The code in this edition is significantly improved from the first edition more efficient and more robust and four new routines are included Java versions for this new edition are also available All code is accessible from the book's Web site <http://cs.smith.edu/orourke/> or by anonymous ftp

Handbook of Discrete and Computational Geometry Csaba D.

Toth, Joseph O'Rourke, Jacob E. Goodman, 2017-11-22 The Handbook of Discrete and Computational Geometry is intended as a reference book fully accessible to nonspecialists as well as specialists covering all major aspects of both fields The book offers the most important results and methods in discrete and computational geometry to those who use them in their work both in the academic world as researchers in mathematics and computer science and in the professional world as practitioners in fields as diverse as operations research molecular biology and robotics Discrete geometry has contributed significantly to the growth of discrete mathematics in recent years This has been fueled partly by the advent of powerful computers and by the recent explosion of activity in the relatively young field of computational geometry This synthesis between discrete and computational geometry lies at the heart of this Handbook A growing list of application fields includes combinatorial optimization computer aided design computer graphics crystallography data analysis error correcting codes geographic information systems motion planning operations research pattern recognition robotics solid modeling and tomography

Diagrammatic Representation and Reasoning Michael Anderson, Bernd Meyer, Patrick Olivier, 2011-06-27 Diagrams are essential in most fields of human activity There is substantial interest in diagrams and their use in many academic disciplines for the potential benefits they may confer on a wide range of tasks Are we now in a position to claim that we have a science of diagrams that is a science which takes the nature of diagrams and their use as the central phenomena of interest If we have a science of diagrams it is certainly constituted from multiple disciplines including cognitive science psychology artificial intelligence logic mathematics and others If there is a science of diagrams then like other sciences there is an applications or engineering discipline that exists alongside the science Applications and engineering provide tests of the theories and principles discovered by the science and extend the scope of the phenomena to be studied by generating new uses of diagrams new media for presenting diagrams or novel classes of diagram This applications and engineering side of the science of diagrams also comprises multiple disciplines including education architecture computer science mathematics human computer interaction knowledge acquisition graphic design engineering history of science statistics medicine biology and others

Advances in Knowledge Representation, Logic Programming, and Abstract Argumentation Thomas Eiter, Hannes Strass, Mirosław Truszczyński, Stefan Woltran, 2015-01-07 This Festschrift is published in honor of Gerhard Brewka on the occasion of his 60th birthday and contains articles from fields reflecting the breadth of Gerd's work The 24 scientific papers included in the book are written by close friends and colleagues and cover topics such as Actions and Agents Nonmonotonic and Human Reasoning Preferences and Argumentation

Theorem Proving in Higher Order Logics Richard J. Boulton, Paul B. Jackson, 2003-06-30 This volume constitutes the proceedings of the 14th International Conference on Theorem Proving in Higher Order Logics TPHOLs 2001 held 3-6 September 2001 in Edinburgh Scotland TPHOLs covers all aspects of theorem proving in higher order logics as well as related topics in theorem proving and verification TPHOLs 2001 was collocated with

the 11th Advanced Research Working Conference on Correct Hardware Design and Verification Methods CHARME 2001 This was held 4-7 September 2001 in nearby Livingston Scotland at the Institute for System Level Integration and a joint half day session of talks was arranged for the 5th September in Edinburgh An excursion to Traquair House and a banquet in the Playfair Library of Old College University of Edinburgh were also jointly organized The proceedings of CHARME 2001 have been published as volume 2144 of Springer Verlag's Lecture Notes in Computer Science series with Tiziana Margaria and Tom Melham as editors Each of the 47 papers submitted in the full research category was refereed by at least 3 reviewers who were selected by the Program Committee Of these submissions 23 were accepted for presentation at the conference and publication in this volume In keeping with tradition TPHOLs 2001 also offered a venue for the presentation of work in progress where researchers invite discussion by means of a brief preliminary talk and then discuss their work at a poster session A supplementary proceedings containing associated papers for work in progress was published by the Division of Informatics at the University of Edinburgh

Theorem Proving with the Real Numbers John Harrison, 2012-12-06 This book discusses the use of the real numbers in theorem proving Typically theorem provers only support a few discrete datatypes such as the natural numbers However the availability of the real numbers opens up many interesting and important application areas such as the verification of floating point hardware and hybrid systems It also allows the formalization of many more branches of classical mathematics which is particularly relevant for attempts to inject more rigour into computer algebra systems Our work is conducted in a version of the HOL theorem prover We describe the rigorous definitional construction of the real numbers using a new version of Cantor's method and the formalization of a significant portion of real analysis We also describe an advanced derived decision procedure for the Tarski subset of real algebra as well as some more modest but practically useful tools for automating explicit calculations and routine linear arithmetic reasoning Finally we consider in more detail two interesting application areas We discuss the desirability of combining the rigour of theorem provers with the power and convenience of computer algebra systems and explain a method we have used in practice to achieve this We then move on to the verification of floating point hardware After a careful discussion of possible correctness specifications we report on two case studies one involving a transcendental function
