Vancouver, Mo Wang, Justin M. Weinhardt, 2023-11-02 This collection provides a primer to the process and promise of computational modeling for industrial organizational psychologists With contributions by global experts in the field the book is designed to expand readers appreciation for computational modeling via chapters focused on key modeling achievements in domains relevant to industrial organizational psychology including decision making in organizations diversity and inclusion learning and training leadership and teams To move the use of computational modeling forward the book includes specific how to chapters on two of the most commonly used modeling approaches agent based modeling and system dynamics modeling It also gives guidance on how to evaluate these models qualitatively and quantitatively and offers advice on how to read review and publish papers with computational models The authors provide an extensive description of the myriad of values computational modeling can bring to the field highlighting how they offer a more transparent precise way to represent theories and can be simulated to offer a test of the internal consistency of a theory and allow for predictions This is accompanied by an overview of the history of computational modeling as it relates to I O psychology Throughout the authors reflect on computational modeling s journey looking back to

its history as they imagine its future in I O psychology Each contribution demonstrates the value and opportunities computational modeling can provide the individual researcher research teams and fields of I O psychology and management This volume is an ideal resource for anyone interested in computational modeling from scholarly consumers to computational model creators Chapter 1 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license
