Environmental Information in Instructions for Use of Consumer Products Ari Nissinen, 2005-03-11 The European Union has highlighted the issue of environmentally sound use of products in the context of Integrated Product Policy IPP. Accordingly, consumers should have easy access to understandable relevant and credible environmental information. Information about product characteristics is available in different forms and sources but in many cases relevant environmental information is not available on the product itself. The study described in this report was initiated in order to produce information on the state of user instructions regarding environmental information. User manuals of passenger cars and refrigerators were focused on examining the advice which could diminish the harmful environmental effects of the use of these products. Other studied products included such durable products as textiles and furniture as well as such consumables as cleaning chemicals and recyclable paper products. The study raised many ideas about actions that could promote the status and eco development of instructions for use. Automotive Industries, 1922 **Riding on Air** Jack Gieck, 1999-10-15 Riding on Air covers the history of air suspension from the earliest patents in the mid 19th century to more current developments. Beginning on buses, air suspension expanded into passenger rail vehicles only to be followed by a crashing failure on passenger cars. But after several precarious years, air suspension began to win almost universal acceptance on trucks and trailers and then in mass transportation, eventually making a successful return to passenger cars. The Automotive Gray Market John B. Hege, 2022-04-18 In the 1970s, as car enthusiasts in the U.S. grew bored with models manufactured under tightening pollution and safety regulations, some innovative dealers exploited a legal loophole designed to allow U.S. soldiers and diplomats to return from abroad with their vehicles to import exotic cars never intended for sale in America. During the 1980s, a rise in the value of the dollar made car shopping in Europe a bargain hunter's dream. A network of unauthorized gray market importers and conversion shops emerged, bypassing factory channels and retrofitting cars to meet U.S. regulations and emission standards at least in theory. These cars had to pass through U.S. customs, a system equipped to handle only a few independent imports annually. As applications ballooned, the regulatory system collapsed. This is the story of a misunderstood but fascinating period in the automotive industry when creative importers found ways to put American motorists in new Ferraris while the EPA and DOT were backed up with mounds of paperwork. **Automotive Industries, the Automobile**, 1923 Citroën Owners Workshop Manual John Harold Haynes, Bruce Gilmour, 1986 **Citroen** Lance Cole, 2014-03-31 In this new view on the Citroen story, automotive aviation writer and design specialist Lance Cole investigates not just the details of the cars of Citroen but the aeronautical and cultural origins that lay behind Citroen's form and function. The book digs deep into the ethos of Automobiles Citroen to create a narrative on one of the greatest car manufacturers in history. Using interviews, translations, archive documents, and specially commissioned photographs, the Citroen journey is cast in a fresh perspective. It explains in detail the influences upon Citroen design. Voisin
