Critical Infrastructures at Risk A.V. Gheorghe, M. Masera, M. Weijnen, L.J. De Vries, 2006-02-15 Europe witnessed in the last years a number of significant power contingencies Some of them revealed the potentiality of vast impact on the welfare of society and triggered pressing questions on the reliability of electric power systems Society has incorporated electricity as an inherent component indispensable for achieving the expected level of quality of life Therefore any impingement on the continuity of the electricity service would be able to distress society as a whole affecting individuals social and economic activities other infrastructures and essential government functions It would be possible to hypothesize that in extreme situations this could even upset national security This book explores the potential risks and vulnerabilities of the European electricity infrastructure other infrastructures and our society as whole increasingly depend on The work was initiated by the need to verify the potential effects of the ongoing market and technical transformation of the infrastructure which is fundamentally changing its operation and performance The final aim is to set the basis for an appropriate industrial and political European wide response to the risk challenges *Securing 'the*

Homeland' Myriam Anna Dunn, Kristian Soby Kristensen, 2020-04-28 This edited volume uses a constructivist reflexive approach to address critical infrastructure protection CIP a central political practice associated with national security The politics of CIP and the construction of the threat they are meant to counter effectively establish a powerful discursive connection between that the traditional and normal conditions for day to day politics and the exceptional dynamics of national security Combining political theory and empirical case studies this volume addresses key issues related to protection and the governance of insecurity in the contemporary world The contributors track the transformation and evolution of critical infrastructures and closely related issues of homeland security into a security problem and analyze how practices associated with CIP constitute and are an expression of changing notions of security and insecurity The book explores aspects of securitisation as well as at practices audiences and contexts that enable and constrain the production of the specific form of governmentality that CIP exemplifies It also explores the rationalities at play the effects of these security

practices and the implications for our understanding of security and politics today *Issues on Risk Analysis for Critical Infrastructure Protection* Vittorio Rosato, Antonio Di Pietro, 2021-07-07 Critical infrastructure provides essential services to citizens. The mutual dependencies of services between systems form a complex system of systems with a large perturbation surface prone to be damaged by natural and anthropic events. Their intrinsic and extrinsic vulnerabilities could be overcome by providing them adaptive properties to allow fast and effective recovery from loss of functionality. Resilience is thus the key issue and its enhancement at the systemic level is a priority goal to be achieved. This volume reviews recent insights into the different domains resilience enhancing strategies impact and threats knowledge and dependency related issues and proposes new strategies for better critical infrastructure protection *The Security of Critical Infrastructures* Marcus Matthias Keupp, 2020-05-05 This book analyzes the security of critical infrastructures such as road rail water health and electricity networks that are vital for a nation's society and economy and assesses the resilience of these networks to intentional attacks. The book combines the analytical capabilities of experts in operations research and management economics risk analysis and defense management and presents graph theoretical analysis advanced statistics and applied modeling methods. In many chapters the authors provide reproducible code that is available from the publisher's website. Lastly the book identifies and discusses implications for risk assessment policy and insurability. The insights it offers are globally applicable and not limited to particular locations countries or contexts. Researchers intelligence analysts homeland security staff and professionals who operate critical infrastructures will greatly benefit from the methods models and findings presented. While each of the twelve chapters is self contained taken together they provide a sound basis for informed decision making and more effective operations policy and defense *Risk Management and Critical Infrastructure Protection* John Moteff, 2005 The 9/11 Commission recommended that efforts to protect various modes of transportation and allocation of federal assistance to state and local governments should be based on an assessment of risk. In doing so the Commission was reiterating existing federal policy regarding the protection of all the nation's critical infrastructures. The Homeland Security Act of 2002 P L 107 296 and other Administration documents have assigned the Department of Homeland Security specific duties associated with coordinating with the nation's efforts to protect its critical infrastructures including using a risk management approach to set priorities. Many of these duties have been delegated to the Information Analysis and Infrastructure Protection IAIP Directorate. Risk assessment involves the integration of threat vulnerability and consequence information. Risk management involves deciding which protective measures to take based on an agreed upon risk reduction strategy. Many models methodologies have been developed by which threats vulnerabilities and risks are integrated and then used to inform the allocations of resources to reduce those risks. For the most part these methodologies consist of the following elements performed more or less in the following order 1 identify assets and identify which are most critical 2 identify characterize and assess threats 3 assess the vulnerability of critical assets to specific threats 4 determine the risk i.e. the expected

consequences of specific types of attacks on specific assets 5 identify ways to reduce those risks and 6 prioritize risk reduction measures based on a strategy The IA IP Directorate has been accumulating a list of infrastructure assets specific sites and facilities From this list the Directorate is selecting assets that have been judged to be critical from a national point of view The Directorate intends to assess the vulnerability of all assets on this shorter list According to Directorate officials vulnerability assessments and threat information are considered when determining the risk watch asset poses to the nation The risk assessment is then used to prioritize subsequent additional protection activities The IA IP Directorate s efforts to date however raise several concerns ranging from the process and criteria used to populate its lists of assets its prioritization strategy and the extent to which the Directorate is coordinating its efforts with the intelligence community and other agencies both internal and external to the Department This report will be updated as needed
