Antarctic Journal of the United States, 1985 **Thunder & Lightning** Lauren Redniss, 2015-10-27 From the National Book Award finalist Lauren Redniss, author of *Radioactive*, comes a dazzling fusion of storytelling, visual art, and reportage that grapples with weather in all its dimensions: its danger and its beauty, why it happens and what it means. WINNER OF THE PEN E O WILSON LITERARY SCIENCE WRITING AWARD, NAMED ONE OF THE BEST BOOKS OF THE YEAR BY SAN FRANCISCO CHRONICLE, KIRKUS REVIEWS, AND SHELF AWARENESS. Weather is the very air we breathe; it shapes our daily lives and alters the course of history. In *Thunder Lightning*, Lauren Redniss tells the story of weather and humankind through the ages. This wide-ranging work roams from the driest desert on earth to a frigid island in the Arctic, from the Biblical flood to the defeat of the Spanish Armada. Redniss visits the headquarters of the National Weather Service, recounts top-secret rainmaking operations during the Vietnam War, and examines the economic impact of disasters like Hurricane Katrina. Drawing on extensive research and countless interviews, she examines our own day and age from our most personal decisions: Do I need an umbrella today? to the awesome challenges we face with global climate change. Redniss produced each element of *Thunder Lightning*: the text, the artwork, the covers, and every page in between. She created many of the images using the antiquated printmaking technique of copper plate photogravure etching. She even designed the book's typeface. The result is a book unlike any other: a spellbinding combination of storytelling, art, and science. Praise for *Thunder Lightning*: An aesthetically charged and deeply researched account, a wild rainstorm of a book pelting the reader with ideas and inspiration. Nature: A gorgeous and illuminating illustrated study of weather in all its tempestuous variety. Redniss's combo of fact, folklore, and vibrant etched copperplate prints enthralls. O The Oprah Magazine: Eerily beautiful. Contains plenty of scientific explanation, including more than a few nods toward global warming, but also far-flung personal stories that illuminate the beauty, wonder, and chaos inherent in the elements. The New York Times: Magical. Redniss has shown us how human beings live with nature, fighting, coexisting, taming, predicting via leech barometer and radar, and intuition. The New York Times Book Review: A twenty-first-century genius. Redniss is inventing a new literary genre. The reader willing to put herself fully in

Redniss's hands will be rewarded with a delicious feeling of being enveloped by a phenomenon that eclipses the chiming trivialities of daily life. Elle Lends a graphic novel like allure to some of nature's most curious paradoxes. Vogue Redniss is one of the most creative science writers of our time; her combination of beautiful artwork, reporting, and poetic prose brings science to life in ways that words alone simply cannot. Rebecca Skloot Redniss combines her own dual punch of expressive art and impressive erudition to give an entirely new take on all that happens above our heads. This is an illuminated book that is also an illuminating one. Adam Gopnik A strange and wonderful thing: the work of a first class mind that refuses to submit to any categories or precedent. Dave Eggers Beautiful and totally original. Elizabeth Kolbert *Sea Ice* Mohammed

Shokr, Nirmal K. Sinha, 2015-03-30 *Sea Ice: Physics and Remote Sensing* addresses experiences acquired mainly in Canada by researchers in the fields of ice physics and growth history in relation to its polycrystalline structure as well as ice parameters retrieval from remote sensing observations. The volume describes processes operating at the macro and microscale, e.g., brine entrapment in sea ice, crystallographic texture of ice types, brine drainage mechanisms, etc. The information is supported by high quality photographs of ice thin sections prepared from cores of different ice types, all obtained by leading experts during field experiments in the 1970s through the 1990s using photographic cameras and scanning microscopy. In addition, this volume presents techniques to retrieve a suite of sea ice parameters, e.g., ice type, concentration, extent, thickness, surface temperature, surface deformation, etc., from space-borne and airborne sensor data. The breadth of the material on this subject is designed to appeal to researchers and users of remote sensing data who want to develop quick familiarity with the capabilities of this technology or detailed knowledge about major techniques for retrieval of key ice parameters. Volume highlights include: Detailed crystallographic classification of natural sea ice, the key information from which information about ice growth conditions can be inferred. Many examples are presented with material to support qualitative and quantitative interpretation of the data. Methods developed for revealing microstructural characteristics of sea ice and performing forensic investigations. Data sets on radiative properties and satellite observations of sea ice, its snow cover, and surrounding open water. Methods of retrieval of ice surface features and geophysical parameters from remote sensing observations with a focus on critical issues such as the suitability of different sensors for different tasks and data synergism. *Sea Ice: Physics and Remote Sensing* is intended for a variety of sea ice audiences interested in different aspects of ice related to physics, geophysics, remote sensing, operational monitoring, mechanics, and cryospheric sciences. Structural Analysis of

Non-Classical Logics Syraya Chin-Mu Yang, Duen-Min Deng, Hanti Lin, 2015-10-16 This volume brings together a group of logic-minded philosophers and philosophically oriented logicians to address a diversity of topics on the structural analysis of non-classical logics. It mainly focuses on the construction of different types of models for various non-classical logics of current interest, including modal logics, epistemic logics, dynamic logics, and observational predicate logic. The book presents a wide range of applications of two well-known approaches in current research: i) structural modeling of certain philosophical

issues in the framework of non classic logics such as admissible models for modal logic structural models for modal epistemology and for counterfactuals and epistemological models for common knowledge and for public announcements ii conceptual analysis of logical properties of and formal semantics for non classical logics such as sub formula property truthmaking epistemic modality behavioral strategies speech acts and assertions The structural analysis provided in this volume will appeal not only to graduate students and experts in non classic logics but also to readers from a wide range of disciplines including computer science cognitive science linguistics game theory and theory of action to mention a few
