Model-Checking Based Data Retrieval Elisa Quintarelli,2004-02-12 This thesis deals with the problems of characterizing the semantics of and assuring efficient execution for database query languages where the database contains semistructured and time varying information This area of technology is of much interest and significance for databases and knowledge bases it also presents many challenging research problems deserving an in depth investigation Thus the topic of Elisa Quintarelli's dissertation is well chosen and totally appropriate to the current research trends In her thesis Elisa addresses a number of related problems However her work and contributions concentrate on two main problems The first is the definition of an effective graph based approach to the formalization of query languages for semistructured and temporal information In her approach query execution is viewed as the process of matching the query graph with the database instance graph therefore query execution reduces to searching the database for subgraphs that are similar to the given query graph The search for such matches can be supported through the computational process of biosimulation This approach is used to define the semantics of several languages including graphical languages such as G Log and GraphLog semistructured information

languages such as Lorel and temporal languages such as TSS QL Both graph based approaches and biosimulation had been used by previous authors for defining query languages and their semantics however this work goes well beyond previous approaches by integrating and refining these techniques into a flexible and powerful paradigm that Elisa demonstrates to be effective on a spectrum of languages and a suite of alt native semantics

Database and Expert Systems Applications Gerald Quirchmayr, Erich Schweighofer, Trevor J.M. Bench-Capon, 1998-08-14 This book constitutes the refereed proceedings of the 9th International Conference on Database and Expert Systems Applications DEXA 98 held in Vienna Austria in August 1998 The 81 revised full papers presented were carefully selected from a total of more than 200 submissions The papers are organized in sections on active databases object oriented systems data engineering information retrieval workflow and cooperative systems spatial and temporal aspects document management spatial databases adaptation and view updates genetic algorithms cooperative and distributed environments interaction and communication transaction advanced applications temporal aspects oriented systems partitioning and fragmentation database queries data data warehouses knowledge discovery and data mining knowledge extraction and knowledge base reduction for comprehension and reuse

Database and Expert Systems Applications Heinrich C. Mayr, Jiri Lazansky, Gerald Quirchmayr, Pavel Vogel, 2003-06-29 th DEXA 2001 the 12 International Conference on Database and Expert Systems Applications was held on September 3 5 2001 at the Technical University of Munich Germany The rapidly growing spectrum of database applications has led to the establishment of more specialized discussion platforms DaWaK conference EC Web conference and DEXA workshop which were all held in parallel with the DEXA conference in Munich In your hands are the results of much effort beginning with the preparation of the submitted papers The papers then passed through the reviewing process and the accepted papers were revised to final versions by their authors and arranged with the conference program All this culminated in the conference itself A total of 175 papers were submitted to this conference and I would like to thank all the authors They are the real base of the conference The program committee and the supporting reviewers produced altogether 497 referee reports on average of 2 84 reports per paper and selected 93 papers for presentation Comparing the weight or more precisely the number of papers devoted to particular topics at several recent DEXA conferences an increase can be recognized in the areas of XMS databases active databases and multi and hypermedia efforts The space devoted to the more classical topics such as information retrieval distribution and Web aspects and transaction indexing and query aspects has remained more or less unchanged Some decrease is visible for object orientation
