A Very Short Introduction Andrew Davies, 2017-10-19 What is a project How are projects organized to deal with a complex rapidly changing and uncertain world Why are projects the organization of the future A project is a temporary organization and one time process established to achieve a desired outcome Projects range in size from small teams to large international joint ventures and temporary coalitions of public and private organizations What distinguishes projects from all other organizational activities such as mass produced products and services is that a project is finite in duration lasting from hours days or weeks to years and in some cases decades Each project is disposable It brings together people and resources to accomplish a goal and when the goal is accomplished the organization disappears When projects are complex unpredictable and changing their plans have to be flexible and able to adjust to situations that cannot be foreseen at the outset In this Very Short Introduction Andrew Davies looks at how projects have developed since the industrial revolution to create the human built world in which we live work and play Considering some of our greatest endeavours such as the Erie Canal Apollo Moon landing Japanese product development and Chinese ecocity projects Davies identifies how projects are organized and managed to design and produce large and complex systems cope with fast changing conditions and deal with the immense

uncertainties required to create breakthrough innovations in products and services He concludes by considering how projects could be organized to address the challenges facing the post industrial society of the 21st century
