the determination of wind induced forces and the design of anchor bolts for petrochemical facilities Current codes and standards do not address many of the structures found in the petrochemical industry As a result engineers and petrochemical companies have independently developed procedures and techniques for handling engineering issues such as the two contained in this report A lack of standardization in the industry has led to inconsistent structural reliability however This volume is intended for structural design engineers familiar with design of industrial type structures

Blast-resistant Highway Bridges Eric B. Williamson, 2010 Explores code ready language containing general design guidance and a simplified design procedure for blast resistant reinforced concrete bridge columns The report also examines the results of experimental blast tests and analytical research on reinforced concrete bridge columns designed to investigate the effectiveness of a variety of different design techniques

Engineering for Extremes Mark G. Stewart, David V. Rosowsky, 2021-12-16 The volume explains how risk and decision making analytics can be applied to the wicked problem of protecting infrastructure and society from extreme events There is increasing research that takes into account the risks associated with the timing and severity of extreme events in engineering to reduce the vulnerability or increase the resiliency of infrastructure Engineering for extremes is defined as measures taken to reduce the vulnerability or increase the resiliency of built infrastructure to climate change hurricanes storms floods earthquakes heat waves fires and malevolent and abnormal events that include terrorism gas explosions vehicle impact and vehicle overload The book introduces the key concepts needed to assess the economic and social well being risks costs and benefits of infrastructure to extreme events This includes hazard modelling likelihood and severity infrastructure vulnerability resilience or exposure likelihood and extent of damage social and economic loss models risk reduction from protective measures and decision theory cost benefit and utility analyses Case studies authored by experts from around the world describe the practical aspects of risk assessment when deciding on the most cost efficient measures to reduce infrastructure vulnerability to extreme events for housing buildings bridges roads tunnels pipelines and electricity infrastructure in the developed and developing worlds
