Design of Low-Noise Amplifiers for Ultra-Wideband Communications Roberto Díaz Ortega, Sunil Lalchand Khemchandani, Hugo García Vázquez, Francisco Javier del Pino Suárez, 2014-01-13 Cutting edge techniques for ultra wideband low noise amplifier design This pioneering resource presents alternatives for implementing power and area efficient integrated low noise amplifiers for ultra wideband communications Design methodologies for distributed amplifiers feedback amplifiers inductor structures with reduced area and inductorless techniques are discussed Cowritten by international experts in industry and academia this book addresses the state of the art in integrated circuit design in the context of emerging systems Design of Low Noise Amplifiers for Ultra Wideband Communications covers Ultra wideband overview and system approach Distributed amplifiers Wideband low noise amplifiers Feedback wideband low noise amplifiers Inductorless techniques

Millimeter-Wave Low Noise Amplifiers Mladen Božanić, Saurabh Sinha, 2017-11-30 This book is the first standalone book that combines research into low noise amplifiers LNAs with research into millimeter wave circuits In compiling this book the authors have set two research objectives The first is to bring together the research context behind millimeter wave circuit operation and the theory of low noise amplification The second is to present new research in this multi disciplinary field by dividing the common LNA configurations and typical specifications into subsystems which are then optimized separately to suggest improvements in the current state of the art designs To achieve the second research objective the state of the art LNA configurations are discussed and the weaknesses of state of the art configurations are considered thus identifying research gaps Such research gaps among others point towards optimization at a systems and microelectronics level Optimization topics include the influence of short wavelength layout and crosstalk on LNA performance Advanced fabrication technologies used to decrease the parasitics of passive and active devices are also explored together with packaging technologies such as silicon on chip and silicon on package which are proposed as alternatives to traditional IC implementation This research outcome builds through innovation Innovative ideas for LNA construction are explored and alternative design methodologies are deployed including LNA antenna co design or utilization of the electronic design automation in the research flow The book also offers the authors proposal for streamlined automated LNA design flow which focuses on LNA as a collection of highly optimized subsystems

Ultra-Wideband Radio Technologies for Communications, Localization and Sensor Applications Reiner Thomä, Reinhard Knöchel, Juergen Sachs, Ingolf Willms, Thomas Zwick, 2013-03-13 Ultra Wideband Radio UWB earmarks a new radio access philosophy and exploits several GHz of bandwidth It promises high data rate communication over short distances as well as innovative radar sensing and localization applications with unprecedented resolution Fields of application may be found among others in industry civil engineering surveillance and exploration for security and safety measures and even for medicine The book considers the basics and algorithms as well as hardware and application issues in the field of UWB radio technology for
