The Airline Profit Cycle Eva-Maria Cronrath, 2017-07-06 The air transport industry has high economic impact it supports more than 60 million jobs worldwide Since the early years of commercial air travel passenger numbers have grown tremendously However for decades airlines financial results have been swinging between profits and losses The airline industry's aggregate net average profit between 1970 and 2010 was close to zero which implies bankruptcies and layoffs in downturns The profit cycle's amplitude has been rising over time which means that problems have become increasingly severe and also shows that the industry may not have learned from the past More stable financial results could not only facilitate airline management decisions and improve investors confidence but also preserve employment This book offers a thorough

understanding of the airline profit cycle s causes and drivers and it presents measures to achieve a higher and more stable profitability level This is the first in depth examination of the airline profit cycle The airline industry is modelled as a complex dynamic system which is used for quantitative simulations of what if scenarios These experiments reveal that the general economic environment such as GDP or fuel price developments influence the airline industry s profitability pattern as well as certain regulations or aircraft manufactures policies Yet despite all circumstances simulations show that airlines own management decisions are sufficient to generate higher and more stable profits in the industry This book is useful for aviation industry decision makers investors policy makers and researchers because it explains why the airline industry earns or loses money This knowledge will advance forecasting and market intelligence Furthermore the book offers practitioners different suggestions to sustainably improve the airline industry s profitability The book is also recommended as a case study for system analysis as well as industry cyclicity at graduate or postgraduate level for courses such as engineering economics or management

Leadership and organisational structures which are not adjusted to the cultural background of the employees concerned are most likely to produce sub optimal results House 2004 Therefore it is necessary to develop appropriate leadership and organisational structures in order to fully grasp the cultural environment to be encountered in the professional world This book presents a research project that was carried out to develop leadership and organisational structures in accordance with the requirements created by different professional backgrounds within the aviation industry The identification of the different professional cultures was undertaken using a standardised questionnaire The development of the questionnaire was carried out with the help of the GLOBE study House et al 2004 one of the most extensive research efforts ever undertaken in the field of organisational and national cultures The main characteristic of the GLOBE study is the development of nine dimensions which serve to identify and characterise any culture These dimensions are referred to as core cultural dimensions Using this newly developed questionnaire it was not only possible to isolate 12 different professional cultures but also to identify their distinguishing traits which served as the base for the subsequent development of leadership and organisational structures The survey was complemented by open interviews served to broaden and deepen the results gained with the standardised questionnaire The research outcomes open the door to a new and important element of cultural research complementary to those of organisational and national cultures Although the study was carried out in the aviation industry the results gained also appear to be transferable to other industries due to the large variety of professions isolated within the course of the presented study and the specific nature of the aviation industry itself
