Representación de funciones

Al comenzar el programa tendremos delante la **Ventana Algebraica** y su menú correspondiente. Definiremos la función $f(x) = x^2 + 5x - 6$ mediante los comandos **Definir/función** que nos abrirá una ventana de diálogo. En el primer renglón de dicha ventana se escribe el nombre de la función, es decir $f(x)$ y en el segundo renglón el cuerpo de la misma. Los exponentes se deben hacer con el acento circunflejo, es decir que para escribir x^2 debemos digitar x^2 . Terminada esta operación, se cierra con **si**, y la función quedará impresa en la ventana algebraica con el numeral 1 (# 1).

Para obtener la representación gráfica abriremos una **Ventana gráfica** mediante los comandos **Ventana/Nueva ventana 2d** o también se la puede pedir directamente con el botón **Ventana2d** (anteúltimo arriba y a la derecha).

Se observará que tanto la Ventana-Algebraica como la Ventana-Gráfica tienen su propia serie de comandos que se habilitan al prender la ventana (para prender una ventana basta hacer un click en cualquier punto de la misma con el mouse, botón izquierdo, con lo que la barra superior se pinta de azul).

Las dos ventanas (Algebraica y Gráfica) deben mantenerse abiertas pudiendo mantenerlas en las diferentes opciones con los comandos **Ventana/Cascada** o **Mosaico horizontal** o **vertical**.

La secuencia de acciones luego de tener abiertas las dos ventanas y escrita la función en la ventana algebraica es la siguiente. Se pinta la función dándole un click con el botón izquierdo del mouse y luego se activa la ventana gráfica. En dicha ventana se activa el comando **Representar**. Obteniendo así la gráfica. El tamaño y las dimensiones de la misma se pueden modificar con los botones de comando que tienen flechitas. Para borrar la gráfica como para generarla se pueden utilizar dos botones de comando de la ventana gráfica (el cuarto y quinto desde la izquierda) que la generan y borran respectivamente.

Se pueden definir mas funciones en la ventana algebraica y luego pedir su representación en la misma ventana gráfica, con lo que se irán superponiendo. En la **Gráfica 1** a la parábola definida anteriormente se le superpuso la recta $y = -x/2 + 5$.

Exportación y pintado de gráficos

Estando activa la Ventana-Gráfica clickeamos el botón de comando **Editar/Marcarycopiar**, luego manteniendo apretado el botón derecho del mouse delimitamos el área a exportar. Al soltar el botón derecho el área seleccionada quedará en el portapapeles a pesar de que en la gráfica no quedará ningún indicador de la operación realizada. Luego de realizadas la operaciones anteriores podemos abrir Word o cualquier otro programa y **Pegar** la gráfica que seguirá estando en el portapapeles mediante **Edición/pegar** o mediante el **pegar** que habilita el botón derecho del mouse. Previamente podemos encender el programa PAINT o COREL y **pegar** la gráfica en el tablero de trabajo de dichos programas para sombrear regiones como es el caso de

Transactions on Aspect-Oriented Software Development VI Robert B. France, Shmuel Katz, Harold Ossher, Jean-Marc Jezequel, 2009-10-26 work for small problems but it introduces significant accidental complexities when tackling larger problems

Not that the real challenge here is not how to design the system to take a particular aspect into account there is significant design know how in industry on this and it is often captured in the form of design patterns Taking into account more than one aspect can be a little harder but many large scale successful projects in industry provide some evidence that engineers know how different concerns should be handled The real challenge is reducing the effort that the engineer has to expend when grappling with many inter dependent concerns For example in a product line context when an engineer wants to replace a variant of an aspect used in a system she should be able to do this cheaply quickly and safely Manually weaving every aspect is not an option Unlike many models used in the sciences models in software and in linguistics have the same nature as the things they model In software this provides an opportunity to automatically derive software from its model that is to automate the weaving process This requires models to be formal and the weaving process be described as a program i.e. an executable meta model manipulating models to produce a detailed design The detailed design produced by the weaving process can ultimately be transformed to code or at least test suites

The Development of Play David Cohen, 2006-10-19 Play is an important part of our development. In playing we learn to move, think, speak, and imagine, as well as cope with other people. This second edition of *The Development of Play* addresses these key functions that play serves. David Cohen examines how children play with objects, with language, and most importantly, with each other and their parents. He goes on to ask why we stop playing and looks at adult games. *The Development of Play* argues that psychology has accepted too uncritically the Victorian opposition of work and play and argues that adults can learn to play more. With its extensive account of recent work in this area, this book is the most up-to-date work on the importance of play and will be of interest to child psychologists, developmental psychologists, and a wide number of professionals involved with children.
