Design with Climate Victor Olgyay, 2015-09-01 Architects today incorporate principles of sustainable design as a matter of necessity. But the challenge of unifying climate control and building functionality of securing a managed environment within a natural setting and combating the harsh forces of wind, water, and sun presented a new set of obstacles to architects and engineers in the mid twentieth century. First published in 1963, *Design with Climate* was one of the most pioneering books in the field and remains an important reference for practitioners, teachers, and students over fifty years later. In this book, Victor Olgyay explores the impact of climate on shelter design, identifying four distinct climatic regions and explaining the effect of each on orientation, air movement, site, and materials. He derives principles from biology, engineering, meteorology, and physics and demonstrates how an analytical approach to climate management can merge into a harmonious and aesthetically sound design concept. This updated edition contains four new essays that provide unique insights on issues of climate design, showing how Olgyay's concepts work in contemporary practice. Ken Yeang, John Reynolds, Victor W. Olgyay, and Donlyn Lyndon explore bioclimatic design, eco design, and rational regionalism while paying homage to Olgyay's impressive groundwork and contributions to the field of architecture.

Bioclimatic Approaches in Urban and Building Design Giacomo Chiesa, 2021-01-04 This book explores the bioclimatic approach to building design. Constant innovations in the field are evident, including the need to face climate changes and increase the local resilience at different scales: regional, urban, architectural. Differently from other contributions, this book provides a definition of the bioclimatic design approach following a technological and performance-driven vision. It includes one of the largest collections of research voices on the topic, becoming also a critical reference work for bioclimatic theory. It is intended for architects, engineers, researchers, and technicians who have professional and research interests in bioclimatic and in sustainable and technological design issues.

Sun, Wind, and Light: Architectural Design Strategies Mark DeKay, G. Z. Brown, 2013-12-16 An updated guide to designing buildings that heat with the sun, cool with the wind, and light with the sky. This fully updated Third Edition covers principles of designing buildings that use the sun for heating, wind for cooling, and daylight for natural lighting. Using hundreds of illustrations, this book offers practical strategies that give the designer the tools they need to make energy-efficient buildings. Hundreds of illustrations and practical strategies give the designer the tools they need to make energy-efficient buildings. Organized to quickly guide the designer in making buildings respond to the sun, wind, and light.

Imperative: Ecology and Ethics in Design and Architecture Victor Papanek, 2022-02-01 A fresh edition of the

sustainable design pioneer Victor Papanek's classic and ever relevant book examining the important role of design in combating climate change. Whether it's horror at the plastic littering the world's beaches or despair at the melting polar ice caps, the world is gradually waking up to the impending climate disaster. In *The Green Imperative*, Papanek argues for design that addresses these issues head on. This means using materials that can be recycled and reused, no more pointless packaging, thinking about how products make us feel and engage all our senses, putting nature at the heart of design, working at a smaller scale, rejecting aesthetics for their own sake, and thinking before we buy. First published at the end of the twentieth century, this book offered a plethora of honest advice, clear examples, and withering critiques, laying out the flaws and opportunities for the design world at that time. A quarter of a century on, Papanek's lucid prose has lost none of its verve, and the problems he highlights have only become more urgent, giving today's reader both a fascinating historical perspective on the issues at hand and a blueprint for how they might be solved.

Drawing Climate Daniel Ryan, Jennifer Ferng, Erik L'Heureux, 2021-11-08. Ephemeral phenomena like fire, precipitation, shade, and wind have emerged as important contemporary protagonists for environmental design due to their dynamic impact on buildings and cities. The importance of including these forces in architecture has gained rapid momentum in the global quest for sustainability. This book investigates the history, theory, and applications of climatic design in the built environment, examining architecture and landscapes from various time periods. Based on a collaboration between the University of Sydney and the National University of Singapore, the book brings together contributing authors from Australia, Singapore, and the United States. Dry, Wet, Cool, and Hot divide the book into categories through which a wide array of representational topics are covered, from dust storms and clouds to ice and bushfires. A concluding section presents project examples for exploratory application in the design of architecture.
