Closed Chain Exercises For Stroke Rehab:

Cardiac Rehabilitation for Stroke Patients: A Physical Therapy Perspective from Acute to Chronic Stage MR. GHALIB ABDULAH ALGHAMDI, MR. ABDULKARIM SAI-HUMAIID, Stroke and cardiac disease are among the top causes of morbidity and mortality globally. Although they were historically considered distinct disorders, recent studies and clinical experience have identified considerable overlap in their pathophysiology, risk factors, and rehabilitation requirements. Acknowledging this overlap, *Cardiac Rehabilitation for Stroke Patients: A Physical Therapy Perspective from Acute to Chronic Stage* attempts to unite the fields of neurology and cardiology in a full and holistic approach to rehabilitation. Intended for physical therapists, rehabilitation professionals, and healthcare providers, this book offers evidence-based guidelines, clinical perspectives, and practical frameworks for providing cardiac rehabilitation in terms of the special needs of stroke survivors. Addressing the continuum of care from the acute phase to chronic longitudinal management, we highlight the necessity of an early intervention, multidisciplinary approach, and patient-centered care. Every chapter is based on contemporary literature but also contains brief and relevant clinical case studies, assessment tools, and intervention protocols. We aim to equip clinicians with the confidence to address the complexities of co-morbid dual diagnoses, to optimize functional outcomes for people living with stroke and co-occurring or pre-existing cardiac disorders, and to improve quality of life.

Exercise for Cardiovascular Disease Prevention and Treatment Junjie Xiao, 2017-11-02 The book provides an intensive overview on exercise for cardiovascular disease prevention and treatment from basic research to clinical practice. The volume firstly summarizes the acute and chronic response to exercise. Secondly, evidence for exercise as medicine for the heart based on clinical studies and basic research is summarized. Thirdly, molecular mechanisms mediating the beneficial effects of exercise, including IGF-1, PI3K, AKT signalling, NO signalling, C/EBP β , Cited4 signalling, Non-coding RNAs, epigenetic regulators, mitochondria adaption, and exosomes are presented. Finally, exercise dosing, prescription, and future prospects are provided. This book will provide valuable reference for researchers in cell biology, physiology, as well as physician, physical therapist in cardiology, sport medicine, etc.
