Regulation of Cancer Immune Checkpoints

Jie Xu,2020-03-17 This book systematically reviews the most important findings on cancer immune checkpoints sharing essential insights into this rapidly evolving yet largely unexplored research topic The past decade has seen major advances in cancer immune checkpoint therapy which has demonstrated impressive clinical benefits The family of checkpoints for mediating cancer immune evasion now includes CTLA 4 PD 1 PD L1 CD27 CD70 FGL 1 LAG 3 Siglec 15 VISTA PD 1L VSIG3 CD47 SIRPA APOE LILRB4 TIGIT and many others Despite these strides most patients do not show lasting remission and some cancers have been completely resistant to the therapy The potentially lethal adverse effects of checkpoint blockade represent another major challenge the mechanisms of which remain poorly understood Compared to the cancer signaling pathways such as p53 and Ras mechanistic studies on immune checkpoint pathways are still in their infancy To improve the responses to checkpoint blockade therapy and limit the adverse effects it is essential to understand the molecular regulation of checkpoint molecules in both malignant and healthy cells tissues This book begins with an introduction to immune checkpoint therapy and its challenges and subsequently describes the regulation of checkpoints at different levels In closing it discusses recent therapeutic developments based on mechanistic findings and outlines goals for future translational studies The book offers a valuable resource for researchers in the cancer immunotherapy field helping to form a roadmap for checkpoint regulation and develop safer and more effective immunotherapies
