Cell And Molecular Biology Of Breast Cancer:

Cell and Molecular Biology of Breast Cancer Heide Schatten,2013-09-27 Highlighting recent advances in our understanding of breast cancer this book is intended for a wide audience as a reference book Included are reviews of genetics epigenetics various aspects of cell and molecular biology and several other areas of breast cancer that are aimed at determining new intervention sites for treatments and cures of the disease The chapters are written by internationally recognized experts and include reviews of key topics in breast cancer research Each chapter highlights the new aspects of specific research topics and the various impacts of designing new strategies as well as identifies new targets for therapeutic intervention The topics addressed are selected to be of interest to patients scientists students teachers and anyone else interested in expanding their knowledge of breast cancer imaging diagnostics therapeutics or basic biomedical research on breast cancer *Mammary Tumor Cell Cycle, Differentiation, and Metastasis* Robert B. Dickson,Marc E.

Lippman,2011-10-30 Mammary Tumor Cell Cycle Differentiation and Metastasis is the fifth volume since 1988 in a series designed to broadly examine current advances in the cellular and molecular biology of breast cancer As in previous volumes the editors have invited recognized experts in cutting edge topics to provide a chapter focused on their area of research The editors have turned to the researchers who study rodent models of the disease and to those who study the cellular and molecular basis of human breast cancer The first section of the book is devoted to new mouse models of mammary development and tumorigenesis The second section moves to studies of human breast cancer and focuses on receptors signalling and the cell cycle The final section deals with defective tissue interactions in human breast cancer We are now in a period of extremely rapid accumulation of data on the molecular and cellular biology of breast cancer These findings are highlighted in chapters from Mammary Tumor Cell Cycle Differentiation and Metastasis Advances in Cellular and Molecular Biology of Breast Cancer Breast Cancer Phuc Van Pham,2017-04-05 Breast Cancer From Biology to Medicine thoroughly examines breast cancer from basic definitions to cellular and molecular biology to diagnosis and treatment This book also has some additional focus on preclinical and clinical results in diagnosis and treatment of breast cancer The book begins with introduction on epidemiology and pathophysiology of breast cancer in Section 1 In Section 2 the subsequent chapters introduce molecular and cellular biology of breast cancer with some particular signaling pathways the gene expression as well as the gene methylation and genomic imprinting especially the existence of breast cancer stem cells In Section 3 some new diagnostic methods and updated therapies from surgery chemotherapy hormone therapy immunotherapy radiotherapy and some complementary therapies are discussed This book provides a succinct yet comprehensive overview of breast cancer for advanced students graduate students and researchers as well as those working with breast cancer in a clinical setting

Cellular and Molecular Biology of Mammary Cancer E. Anderson,G. Heppner,W. Kidwell,Daniel Medina,2012-12-06 The idea for this book arose during the 1985 Gordon Conference on Mammary Gland Biology New developments in the

methodology of cell biology and the explosive growth of molecular biology had begun to impact upon our understanding of mammary gland growth and function. It seemed a propitious time for summarizing the current status of knowledge of the cell and molecular biology of mammary cancer and for attempting to outline future areas of concern and interest. The reviews presented here were completed by the Fall of 1986. Although new insights will surely continue to emerge, it is hoped that the material in this volume will form not only a current update but a basic core of information for future experiments. We have not attempted to cover all areas of mammary gland transformation. Those areas where recent detailed reviews are already available have been omitted. Also the areas of normal gland development, cell ultrastructure, hormone responsiveness, chemotherapy, and clinical aspects of mammary cancer have not been included. Instead, we have selected those areas where the development of new methodology, reagents, and results have led to new ideas about mammary gland function and development as they are related to neoplasia.

Where do you begin to look for a recent authoritative article on the diagnosis or management of particular malignancy? The few general oncology text books are generally out of date. Single papers in specialized journals are informative but seldom comprehensive; these are more often preliminary reports on a very limited number of patients. Certain general journals frequently publish good in-depth reviews of cancer topics, and published symposium lectures are often the best overviews available. Unfortunately, these reviews and supplements appear sporadically, and the reader can never be sure when a topic of special interest will be covered. *Cancer Treatment and Research* is a series of authoritative volumes which aim to meet this need. It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics, revised frequently to keep the coverage up to date, easily available on a single library shelf or by a single personal subscription. We have approached the problem in the following fashion: First, by dividing the oncology literature into specific subdivisions such as lung cancer, genitourinary cancer, pediatric oncology, etc. Second, by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis. Each topic and tumor type is covered in a volume appearing frequently and predictably, discussing current diagnosis, staging, markers, all forms of treatment modalities, basic biology, and more.

Regulatory Mechanisms in Breast Cancer Marc E. Lippman, Robert B. Dickson, 2012-12-06 In Breast Cancer Cellular and Molecular Biology Kluwer Academic Publishers 1988 we tried to present an introduction to the emerging basic studies on steroid receptors oncogenes and growth factors in the regulation of normal and malignant mammary epithelium The response to this volume was superb indicating a tremendous interest in basic growth regulatory mechanisms governing breast cancer and controlling its malignant progression In the two years since its publication much new and exciting information has been published and the full interplay of regulatory mechanisms is now beginning to emerge We have divided this book into four sections that we hope will unify important concepts and help to crystallize areas of consensus and or disagreement among a diverse group of basic and clinical scientists working on the disease The first section is devoted to studies on oncogenes antioncogenes proliferation and

tumor prognosis The first chapter by Sunderland and McGuire introduces the characteristics of breast cancer as studied by pathologists to establish prognostic outcome Of particular interest is a new proto oncogene called HER 2 or neu which is rapidly becoming accepted as a valuable new tumor marker of poor prognosis The second chapter by Lee Bookstein and Lee introduces the best known antioncogene the retinoblastoma antioncogene whose expression is sometimes lost in breast cancer Malignant progression appears to be influenced by the balance of proto oncogene and antioncogene expression
