elements of Galois theory focusing on related concepts from field theory including the structure of important types of extensions and the field of algebraic numbers A consideration of relevant facts from group theory leads to a survey of Galois theory with discussions of normal extensions the order and correspondence of the Galois group and Galois groups of a normal subfield and of two fields The second part explores the solution of equations by radicals returning to the general theory of groups for relevant facts examining equations solvable by radicals and their construction and concluding with the unsolvability by radicals of the general equation of degree $n \geq 5$ *Light Scattering by Small Particles* H. C. van de Hulst, 2012-06-08 Comprehensive treatment of light scattering properties of small independent particles including a full range of useful approximation methods for researchers in chemistry meteorology and astronomy 46 tables 59 graphs 44 illustrations
