Crash How To Protect And Grow Capital During Corrections:

Crash Ivaylo Ivanov, 2015-09-14 The odds of an investor experiencing a big market crash during his her life are 100% A well diversified portfolio will save you from losing money in any 10 year period but it also save you from achieving high returns over time Diversification won t save you from experiencing big drawdowns during market panics when correlations go to 1 00 and all assets move together up and down disregarding of underlying fundamentals Paul Tudor Jones says that once in a hundred years events have started to occur every five years Obviously his comment is more of an anecdote than a statistical fact but it is also a reflection of a timeless market truth the obvious rarely happens the unexpected constantly occurs The stock market is not a place where for one party to win another has to lose It is a place driven by cycles periods when almost everyone is a winner followed by periods when almost everyone is a loser Everyone could make a lot of money during market rallies when liquidity and performance chasing lift all boats and trump all bad news Not everyone keeps that money when the inevitable correction comes They say that the definition of insanity is doing the same thing over and over again and expecting different results Well if you do the same things over and over in financial markets you are guaranteed to get different results Markets change luckily in a relatively cyclical manner unluckily the duration of each cycle is unpredictable Patterns repeat all the time because human mindset hasn t changed for thousands of years Since 1980 the S P 500 has had an average intra year decline of 14 2% In 27 of last 35 years stocks have still been positive for the year Corrections come a lot slower than anyone expects but once they happen they escalate faster than most could imagine The typical correction has distinct stages that vary in duration and require different tactical approach 1 Quick and wide spread leg lower that ends with a momentum low 2 Oversold bounce 3 Choppy period that whipsaws both bulls and bears 4 A Retest of the momentum lows with breadth divergence 5 A Recovery The history of U S stock markets has been a perpetual long term uptrend interrupted occasionally but very consistently by shocks Most of those shocks take the form of short term drawdowns that come and go Some corrections turn into bear markets that last more than a year They say that almost everyone loses money in bear markets both bulls and bears Bulls because they stubbornly hold on to positions in favorite companies and some stocks never recover from deep drawdowns Bears because they get squeezed during the violent rallies that happen under declining 200 day moving averages Bear markets should be respected but they should not be feared They require a different approach than what most are get used to in bull markets I wrote this book mainly to serve as my own guidance to organize my thoughts and learn more in the process Keep in mind that everyone has his own agenda and bias including me The following pages present the perspective of a trader who believes in active portfolio management and stock picking The thought process and observations that I share here might not be suitable for everyone By reading this guideline you will become better educated in the following subjects How to protect capital during market corrections When to raise cash take profits and sell long holdings When and how to hedge How to remain calm and protect your confidence during

correctionsHow to make money on the short side during market correctionsHow to survive extremely choppy periods during market correctionsHow to be flexible and prosper during long bear marketsHow to recognize market bottomsHow to make money during market recoveriesHow to use social media during corrections

Kelly Capital Growth Investment Criterion, The: Theory And Practice Leonard C Maclean, Edward O Thorp, William T Ziemba, 2011-02-10 This volume provides the definitive treatment of fortune's formula or the Kelly capital growth criterion as it is often called. The strategy is to maximize long run wealth of the investor by maximizing the period by period expected utility of wealth with a logarithmic utility function. Mathematical theorems show that only the log utility function maximizes asymptotic long run wealth and minimizes the expected time to arbitrary large goals. In general the strategy is risky in the short term but as the number of bets increase the Kelly bettor's wealth tends to be much larger than those with essentially different strategies. So most of the time the Kelly bettor will have much more wealth than these other bettors but the Kelly strategy can lead to considerable losses a small percent of the time. There are ways to reduce this risk at the cost of lower expected final wealth using fractional Kelly strategies that blend the Kelly suggested wager with cash. The various classic reprinted papers and the new ones written specifically for this volume cover various aspects of the theory and practice of dynamic investing. Good and bad properties are discussed as are fixed mix and volatility induced growth strategies. The relationships with utility theory and the use of these ideas by great investors are featured.
